

sults can be output to an LCD screen, Biomonitor or Times Square marquee.

Voice Synthesizer: This system allows the user to mimic any voice or tone previously recorded by its memory chip. The chip can store up to 10 "voices". This system also gives the user a +4 to any Disguise attempt (now you really sound like the person you're imitating).

AudioVox: This system allows the user to control vocal tones, volume and tone quality with the precision of a musical synthesizer. Special effects (reverb, tremolo, sustain and choral voices), loudspeaker volumes and vocal delay programming (for singing with yourself) are also possible. This effect adds +2 to any vocal Performance Skill check.

Bioware

Bioware is anything which is primarily low-impact technology that is designed along biological rather than mechanical lines.

Most bioware enhancements involve the use of *nanotechnology*; tiny machines the size of microbes, which can perform surgical tasks on the cellular level. These "nanoids" are injected into the area to be affected, along with a supply of the raw materials needed to perform their jobs (for example, long string polymers which can be woven by the nanoids into a type of subdermal armor called skinweave). Powered by body heat and nutrient chemicals, these tiny machines quietly go about their business, strengthening muscles and altering body chemistry.

Grafted Muscle: This is vat-grown muscle grafted onto your own, with healing. With this modification, you may increase your Body Type stat up to 2 points, paying 1000 eb per point. It can be combined with Muscle/Bone Lace.

Muscle & Bone Lace: Also known as *viral transformation*, this enhancement involves two types of nanoids. The first type threads synthetic muscle through the natural muscle fibers, anchoring and strengthening them. The second type wraps the bones in a light weave of metal and plastic threads, making them stronger and thicker. The result is an increase of +2 to the character's Body Type stat. This increase is both in strength and the ability to absorb physical

damage. This enhancement is virtually undetectable and takes about two weeks (Body Type increases by 1 each week).

Skin Weave: This enhancement uses nanoids to weave the top three layers of skin with a dense polymer thread. The result is a bare skin SP of 12, equivalent to light body armor. The process is relatively discreet (a DIFFICULT Awareness check to notice), and takes about two weeks (SP increases by 6 each week).

Enhanced Antibodies: These are tailored antibodies capable of attacking the most powerful

" So I went into the Clinic for the treatment. They jammed an IV into my arm, and made me drink a lot of horrible concoctions. A week went by. I was working on the dock when a pallet broke loose and trapped the foreman. I walked over, grabbed, and lifted the pallet off him. A quarter ton. Frack. This nanotech stuff is scary!"

viruses. In game play, they double the rate of healing.

Toxin Binders: These are nanoids designed to bond with body toxins and poisons. This enhancement adds +4 to all poison saves.

Nanosurgeons: These are microscopic machines adapted to surgical repair. Some seal off damaged blood vessels, while others repair damaged tissue, cartilage and bone with polymer microstiches. This enhancement doubles normal healing time.

Cyberweapons

At the top of the Black Cyberware hit list are cyberweapons; hidden killing tools that can be buried in your skin until the moment you want to take someone out. Cyberweapons are normally not available on the open market (the only exception are scratchers and vampires), and locating them usually involves going down into the local Combat Zone, finding a Fixer, and paying a lot of euro to ugly, nasty, violent people who would normally consider you spare parts.

Boosters, of course, are drawn to cyberweapons like a 'zoner to zoom dust.

Scratchers: Implanted metal or carbo-glas fingernails. The incredible sharpness of the mate-

**"Rippers.
Vampires. Skin
grafts.

**"Werewolves.
Whoa, whatta
great idea. I
gotta work on
that..."**

—Ripperjack

rial makes these as deadly as razor blades (1D6/2 per hand damage). Scratchers cut on the bias, requiring the user to slice crossways, not rip downwards. Most people lacquer their scratchers, making them indistinguishable from normal nails (the enamel has no effect on the sharpness). These are not considered lethal (and therefore black market) cyberwear, and can be purchased in any local clinic.

Vampires: Implanted fangs, usually made up of carbo-glas or superchromed metal. You can have a full set implanted (called the Sharkgrin Special, it causes 1D6/2 in bite damage), or canines only (1D6/3 damage). These are considered to be "decorative," not black market cyberwear, and can be purchased in any local clinic. Vampires can be augmented with poison injectors (which are black cyberware) for double the normal price.

Rippers: Longer, heavier versions of scratchers (1D6+3 per hand damage). The top two joints of each finger are replaced with a plastic and metal sheath, in which three inch carbo-glas claws are housed. The rippers can be extended by clawing the hand in a catlike fashion. Most people wear false fingernails over their rippers, making them much harder to spot (a DIFF task). Rippers are considered a form of black market cybertech and as such is not accessible through the average on-the-Mall clinic. Rippers cut in all directions, and are considered Edged weapons for AP purposes.

Wolvers: The longest and deadliest of the implant blades, wolvers are implanted along the back of the hand. When the hand is clenched in a fist, the thin, triangular blades telescope and lock into place, remaining extended a full foot until the hand is relaxed. Damage is 3D6/hand. Treat as Edged weapons for AP purposes.

BigKnucks: Reinforced knucklebones, giving the fist the impact value of a pair of brass knuckles (1D6 +2). This is considered a form of black market cybertech, and as such is not accessible through the average on-the-Mall clinic.

Slice N' Dice: Mono-filament wire spool mounted in end of one finger, with a weighted, false fingernail to give it balance and swing. Monomolecular wire will cut through almost any organic material and most plastics. Can be used as a garrotte, cutter or slicewhip. This is considered a form of black market cybertech, and as such is not accessible through the average on-the-Mall clinic.

Cybersnake: This is a simpler version of the cybersnake found in the *Hardwired* supplement.

This version has far less features and is limited to making a rake attack only. The rake has a range of 1 meter and inflicts 1D6 in damage each time it hits. The cybersnake may be mounted in any body orifice 1" or larger, or may be implanted in the shoulders using a special mount.

Cyberoptics

A combination of digital processor and camera, cyberoptics are replacements for normal eyes. Cybervision is just like regular vision, only better. Colors are brighter, images sharper. And that's just the start.

Want to see life as a 30's black and white movie? No problem. Telescopic or microscopic vision? Optional. Infrared and low light vision? Standard for Solos.

Cyberoptics can look exactly like normal eyes, although a wide variety of fashion iris colors are available (amber, white, burgundy and violet are very popular). Some versions are transparent, with glitter or lights swirling inside of them. Other are superchromed for a more "cyber" look. Others can change eye color at will or to match clothes and surroundings. Some even have tiny designer logos around the iris. Cyberoptics with cameras or weapons usually load from the front, with the iris opening up when the front of the eye is depressed.

Color Shift: These cyberoptics can shift color or iris pattern on demand. A full color shift takes about a minute. Mirrored, transparent, glitter-filled or lighted versions are also available.

Infrared: Allows user to see in near total darkness, using heat emissions for image reception.

Times Square™ Marquee: Scrolling red-letter screen in upper edge of vision, linked to either a software chip readout or a radio link.

Targeting Scope: This projects a targeting sight into the field of vision at will. The targeting scope will read range to specific objects, speed of movement, bearing and size, as well as providing several types of scope reticle for aligning weapons. When chipped into a smartgun, the scope will match the targeting sensors of the gun with what you are looking at, then flash a "ready signal" when the target is acquired. In game terms, this option allows you to add +1 only to smartgun attacks.

Anti-dazzle protection: Auto stepdown compensates for harsh sunlight, flares, etc., neutralizing effects from strobes, flashbombs and bright headlights. Never need sunglasses again.

Low-Lite™: Allows user to see clearly in dim light conditions, down to very faint moonlight or distant streetlamps.

Image Enhancement: High-res graphics capability allows user to enhance and refine images viewed. When activated, increases Awareness skill by +2, allowing user to pick up visual cues in greater detail.

Thermograph Sensor: Allows user to see heat patterns of objects, people. Cooler things show up as dark to light blue, hotter things as red or orange, and the hottest of all as yellow or white. Used to distinguish differing heat sources through light structural material, or the presence of cybernetics (which are always cooler than normal body temperatures). Can also determine the operating time of certain machinery by measuring its cooling gradient.

Dartgun: One shot dartgun. Range of 1 meter, +2 WA. Poison dart will penetrate up to SP6 automatically, SP8 50% chance, soft armors only. Takes 3 spaces.

Micro-Optics: This is the equivalent of a laboratory microscope, allowing the user to see microscopic images, such as fingerprints, scratches on locks, etc.

Teleoptics: This is the equivalent of a 20x power telescope, allowing the user to see distant objects clearly.

Ultra Violet: This system allows the user to perceive images irradiated by ultraviolet light, or to detect florescent powders or tracing agents, or to use ultraviolet flashlights (undetectable by normal optics) for illumination.

MicroVideo: This is a cyberoptic mounted video camera which records its view on an internal video tape (20min). This recorder can also be downloaded through interface plugs to an external source. Takes up two option spaces.

Digital Camera: This cyberoptic mounted camera takes up two option spaces. Up to 20 images can be recorded on the built-in digital chip and downloaded through interface cables to an external recorder, internal recorder, or an

internal LCD screen. As new pictures are taken, the previous ones are erased.

Cyberaudio

Cyberaudio systems patch into the auditory nerves and speech centers of the brain. This enhancement affects both ears, and also includes a subvocalizing mike on the mastoid bone. There is no visible change to the outer ear, although some cyberpunks replace the outer ear with a set of mechanical speaker pickups for max effect.

Radio Link: A microminiature radio transceiver, usually mounted at the base of the skull and using your fillings as the antennae. It is activated by clicking the teeth together sharply. To talk, you merely subvocalize (mutter under your breath). Reception is carried out in one of two ways: 1) a receiver directly vibrates the mastoid bone, giving you a small tinny voice in the back of your head, or 2) linked to a cyberoptics Marquee option, incoming messages are

flashed into the upper edge of your field of vision as red scrolling letters. In game terms, having a radio implant gives you the ability to talk to any receiver on the same band frequency for up to 1 mile. It also means you occasionally get someone else's radio messages.

Phone Splice: An improved radio splice, this implant is wired to communicate directly to your personal cellular phone. In practice, it allows you to do everything the radio splice does, but you must have your phone within 3 meters of you, and it must already be turned on and the number dialed. Audio splice is commonly used by busy Corporates who want to be able to answer calls, even in a meeting. One of the biggest advantages of audio splice is its range—anywhere your phone will go, you can go. Even the Moon.

ECM Scrambler: This implant improves your radio or audio splice with a scrambler, so it cannot be listened into. In game terms, this makes all radio or audiosplice communications private, unless the interceptor has a descrambler unit and a lot of time on his hands.

Bug Detector: This mini-receiver is designed to pick up signals transmitted by all types of radio bugs. When the bug is active, its transmissions

*"I can see for
miles and miles
and miles and
miles and
miles..."*

Tribute to Tommy,
2019

"It's one thing to smell the fear on your opponent's skin. But it's another to get a four-color digital readout of his terror; a full spectrum recording of his lies and evasions as he desperately tries to save his life..."

—Morgan Blackhand

"In the Future, there's no place to hide from yourself..."

—Lyle McClellan,
Network 54

make a small beeping noise in the back of your head, getting louder as you get closer to the bug. In game terms, this gives you a 6 out of 10 chance (roll 1D10, choose your six numbers) of detecting any bugs within 10 feet of you. A normal option for Corporates, Fixers and Solos.

WearMan™: A variant of the radio splice, the WearMan mounts twin vibration speakers on your mastoid bones, making your skull into a audio system of concert hall quality. A tiny chip mount wired into the earlobe allows you to plug in a variety of music chips, all fashioned to look like earrings. Or you can plug in direct to your interface plugs. Each chip contains about 100 songs. Selections are fast-forwarded by squeezing the earring gently, once per selection. When the chip is removed, the WearMan turns off. A teenybop fave.

Amplified Hearing: This system improves hearing and sound recognition ability, adding +1 to any sound-related Awareness check.

Voice Stress Analyser: This system acts as a lie detector, detecting minute changes in vocal patterns and tones and comparing these to a pre-recorded set of parameters. You must first use the analyser on the subject while he/she is in an unstressed situation or is telling the truth. All subsequent tests will give you a +2 to Human Perception or Interrogation skill checks on that particular subject.

Sound Editing: This system allows the user to edit out distracting noises or "zero in" on a particular sound. Activation of this system adds +2 to any sound-related Awareness check. Sound editing can be used in conjunction with Amplified Hearing or Enhanced Hearing.

Enhanced Hearing Range: This subsystem allows the user to hear tones in the subsonic and supersonic ranges.

Radar Detector: This system produces a loud beep whenever a radar beam is encountered. It also has a 40% chance of triangulating the source; when the direction of the beam is determined, the beep changes to a clear tone.

Homing Tracer: This option allows the character to follow a homing tone broadcast from an external sender. Range is 1 km. The tone increases in volume as the user gets closer to his target. The homing tracer comes with two senders, about the size and shape of a pin. Extra senders cost 25seb. each.

Tight Beam Radio Link: This option allows tight beam radio communication for up to 1 mile, as

long as both parties are within line of sight to each other and not blocked by any object thicker than 1 foot.

Wide Band Radio Scanner: This option automatically scans all major police, fire, ambulance, and Trauma Team communication bands. The user can set this scanner to cover one specific band, downloading any incoming messages to his own internal radio link or Times Square marquee.

Micro-recorder Link: Downloads anything heard by the user to either an internal or external (via interface plugs) sound recorder.

Digital Recording Link: This option allows anything heard by the user to be recorded on an internal microchip (2hrs). Recordings can be downloaded to an internal recorder or via interface plugs to an external recorder.

Level Damper: This system automatically compensates for loud noises, such as stun-bomb attacks or sonic weapons. Characters with this option can ignore all effects of these weapons.

Cyberlimbs

When the man on the Street thinks of cyborgs, what he thinks of are artificial limbs; whirring, glittering metal constructs of steel, wire and microchip circuitry. Although real arms, legs, and organs can easily be grown in bio-tanks or replaced from body banks at a much lower cost, artificial limbs are still a popular fad of the Cyberpunk future. They are chromed, airbrushed, jeweled, lighted, and even sculpted in the pursuit of true cybertech chic.

Under all the designer fashion, the standard cyberlimb is an aluminum and steel basket framework, with artificial myomar plastic muscles controlling motion. The joints are stainless steel. The cyberlimb plugs into a special nerve interface jack mounted in the flesh above the limb, while the main unit is coupled to a metal and plastic cuff around the meat part of the limb. The cuff is usually placed at the upper bicep/thigh or the elbow/knee, however, arms may also be attached to an artificial shoulder (see below), and anchored to an external arm mount.

Cyberlimb Myths & Abilities

The popular myth about cyberlimbs is that they enable their owners to perform all

kinds of superheroic feats. To a point, it's true; cyberlimbs can be designed with boosted strength and speed, using synthetic muscle fibers and silicon chips. What you won't find are people running at 200 miles an hour, bending steel bars with their hands or throwing Volkswagens around. Why can't you go around lifting cars and punching down walls like the cyborgs in the comics? Simple physiology. The replacement limb must be able to work in concert with the remaining "meat" parts of the body. Even if your arm was ten times stronger than before, the back and shoulder muscles supporting that cyberlimb wouldn't be—and they'd shred long before the artificial muscles did. But within limits, a cyber-equipped person can do some pretty impressive party tricks:

Crushing: A cybernetic arm uses synthetic muscle fibres instead of flesh and blood. They don't get tired, and they don't feel pain. They are also much stronger than normal muscle tissue. This gives a cyberarm tremendous gripping power. All cyberlimbs can easily crush light metals, woods and plastics. They can crush glass and plastic to dust (although they can't crush lumps of coal into diamonds!). In combat, any crushing grip with a cyberarm will do 2D6 damage.

Pain: Cyberarms never grow tired, allowing the wearer to hang from high places indefinitely. You can turn off the touch sensors with the flick of a mental switch, eliminating pain and allowing you to perform feats such as reaching into raging fires, dabbling in tanks of liquid nitrogen, and picking up red-hot pokers. A gunshot wound to a cyberlimb has no pain effects; you don't have to make a saving roll against shock and stun.

Damage: Cyberlimbs can take (and dish out) a tremendous amount of damage, so much so that they are treated like machinery for the purposes of game combat. All cyberlimbs can take up to 20 points of structural damage before they are useless, and up to 30 total points of structural damage before they are destroyed. A cyberarm punch does 1D6 damage to its target; wall, car, someone's head; no matter. A cyberleg kick will do 2D6 damage.

Leaping: Cyberlegs employ powerful pistons and microsensors, backed by bundles of synthetic muscles. With a pair of them, you can leap tremendous distances. Characters with paired cyberlegs can leap 6 meters straight up, or make a running jump of up to 8 meters.

Options

These are things which can be done to a basic cyberlimb to improve its strength, damage capacity, or flexibility. In addition to these improvements, artificial shoulders can be mounted at waist level to provide extra arms. A cyberlimb can hold up to 4 options or built-ins. A hand or foot is considered to be one option. (Cyberlimbs automatically come with basic foot modules.)

Quick-change mounts: These allow the user to change cyberlimbs without using tools. The limb is bayonet mounted, and can be removed by depressing a thumb catch and twisting to the left. Quick-change mounts may also be used at the wrist or ankle joints to allow a variety of hands or feet to be used. To calculate HL, average the HC's of all the options you're using with the mount, then double it.

Hydraulic rams: Common to Soviet cyberwear, rams are bulkier and heavier than myomar fibers (the limb will not pass inspection as real no matter how well covered by Realskinn™), but can take more damage (30 SDP to disable, 40 to destroy). Limb strength is also increased (3x crush, punch, and kicking damage).

Thickened myomar strands: These give limbs greater strength (2x normal damages) and durability (+5 SDP). Leaps are increased by 50%.

Reinforced joints: These are made of titanium steel instead of stainless, and add +5 SDP to the cyberlimb.

Artificial shoulders: These are swivel joints which can be mounted to a back mounted frame. This allows up to two extra arms to be mounted at waist level. The unit has an SDP of 25.

Microwave & EMP shielding: Protects your cyberlimb from electromagnetic pulse and microwave attacks. Shielding may be placed on any type of limb no matter what covering is used; it is placed internally, using up one space in the limb.

Coverings: While all cyberlimbs come in a stripped or uncovered state, they can be covered in a variety of ways. The cheapest method is a plastic covering, available in a variety of

*"So I kicked off
th' roof and
jumped the gap
between
rooftops.
Whammo. My
right cyberleg
punched through
the cheap 'crete
as I hit the other
side.
'Reached out and
grabbed a big
pipe to keep from
fallin', and my
cyberhand
crushed it into a
metal
pretzel...just
wasn't my
night..."*

—Ripperjack

"Two optional hands, including a tool model. Cybermodem up the bicep, with a popup 9 mm. Jeeze. Guy's left arm looks like a frackin' Swiss Army knife..."

"Shaddup and help me loot the body, Ripper."

—Ripperjack

colors, with airbrushing, or transparent with imbedded lights and holography. A plastic covering may also be chromed (a popular option), or covered with a metallic skin tinted in golds, blues, greens, reds or silvers. The most expensive option is Realskinn™, a flexible plastic that looks very much like skin; with follicles, hairs, small scars and imperfections, it has a 75% chance of passing as a "meat" limb to all but the closest inspection.

In lieu of a covering, the cyberlimb can be armored with Kevlar and ballistic plastic. This armor covering protects the limb with an SP of 20. However, you may not cover or chrome an armored limb.

Hands & Feet

The basic cyberlimb comes without hands or feet attached; these are purchased separately, allowing the user to tailor the limb to his or her specific needs. These parts can be changed by unfastening a series of connection bolts, and reconnecting the new hand or foot (taking about four turns).

No, you can't put hands on legs and vice versa. Get a life.

Standard Hand: This resembles a normal hand; four fingers and a thumb. The hand is covered, superchromed or armored as part of the arm.

Ripper Hand: This is a normal hand with ripper blades mounted in the upper hand and wrist area.

Hammer Hand: This hand is made of hardened titanium and has a powerful explosive shell-driven ram that acts like a jackhammer. You punch, the shell goes off, driving the fist forward with incredible velocity and power (1D10 damage). A port in the top ejects the shell and opens to receive a new one (replacements cost 3eb).

Buzz Hand: This hand can be pulled back to reveal small, spinning mono-wires around a titanium hub. The high speed "weed wacker" shears through most materials like butter. Damage is 2D6+2, soft armors reduced 2 pts./hit.

Tool Hand: This hand's four fingers conceal small microtools: 1) screwdriver with changeable heads, 2) adjustable wrench, 3) battery-powered soldiering iron, 4) adjustable socket wrench. The lower edge of the palm is hardened to make a dandy hammer.

Grapple Hand: This hand's fingers extend backwards to create a five fingered throwing grapple. A small spool in the wrist contains 30 meters of fine, super strong line capable of supporting 200 lbs.

Extension Hand: This hand can extend from a telescoping wrist mount up to 1 meter. Can support up to 200 lbs.

Spike Hand: This hand contains a hardened titanium spike which telescopes out of the wrist and through the lower palm. Can be Poisoned and is useful for climbing. Damage is 1D6+3 AP.

Modular Hand: This unit contains 1) Drug injector, 2) 1 meter garotte line extending out of fingertip, 3) One-inch monomolecular blade for cutting, 4) Picklock. In addition, there is a 2"x2" Palm Storage Space.

Talon Foot: This foot can extend narrow blades similar to scratchers for 1D6 damage. Treat as Edged weapon for AP damage.

Tool Foot: The toes of this foot contain (1) screwdriver with changeable heads, (2) adjustable wrench, (3) battery-powered soldiering iron, (4) adjustable socket wrench, (5) wire saw blade.

Web Foot: Extends thin webs from either side of foot, as well as webs between toes. Doubles normal swimming speed, plus add +3 to swimming skills.

Grip Foot: Toes of this foot can extend and curl around a 2" bar. The soles are covered in a tacky rubberized material for increased traction. Adds +2 to climbing skills.

Spike Heel: A 6" spike projects from the heel of this foot, allowing the user to make deadly rear kicks (damage is 2D6AP). Can be used for anchoring or climbing.

Built Ins

These are options which are constructed within the cyberlimb for specific tasks. Like most cyberweapons, they are designed for maximum concealability, and have a 60% chance of passing a casual inspection if covered with Realskinn™ or a suitably realistic covering.

Cybermodem: This option allows the user to carry a small (and very expensive) cybermodem with him at all times. The modem must be jacked into a DataTerm, computer or other

telecommunications line in order to be used. Power (for up to 3 hours) is provided by a rechargeable battery (recharges in 1 hour), or through an external power cord. Program chips are changed through an access port in the limb. The cybermodem is directly jacked into the nervous system through its own internal cables, and does not require external interface plugs.

Cellular Cybermodem: This very, very expensive version of a cybermodem allows the Netrunner to interface directly with the Net without a direct telecommunications link. A "CellCyb" can only be used in a major city (population greater than 100,000) where a cell net is present. If used while in a moving vehicle, there is a 25% chance each turn that the connection will be broken and need to be re-established in the next turn.

Digital Recorder: This unit can record input from internal microphones, digital recording links, digital cameras, or all three.

Audio/Video Tape Recorder: This unit uses microcassettes to store input from its internal microphone, video cam or digital recording link.

Storage Space: This is a 2x2x6 inch storage space with a locking cover.

MiniCam: This is a small digital camera which pops up from a mount in the upper arm. Internal chip stores 20 images and can be easily changed.

MiniVid: A pop up video camera with mini cassettes that can store up to 4 hours of recorded images.

Hidden Holster: Leg only. A hidden storage space for holding one autopistol and 1 clip of extra ammo. The size of the leg (based on Body Type) limits the size of weapon which may be stored.

V.Weak to Weak Light Pistol
Average to Strong Medium Pistol
Very Strong Heavy Pistol
Very Strong Folding Shotgun
(2sht., 1/2 range)

LCD Screen Readout: This 2"x4" TV screen can display color graphic images. It is normally covered with a transparent screen guard. Images can be taken from digital recorders, minivids and minicams, and cyberoptics. A cable can be extended from an AUX port and plugged into any standard interface plug to transfer images from someone else's cyberoptics or recorders.

Techscanner: This device can be hooked up to the diagnostic systems of most vehicles, appliances and personal electronics to determine possible problems and troubleshoot breakdowns.

Combat Cybermodem

Reliability is 60%. On a successful roll, the difficulty of a repair task is reduced by -3 (you know what's wrong, and you just have to fix it).

Cyberweapons

One advantage of cyberlimbs is the ability to mount weapons within their framework. Most cyberweapons of this sort are designed for stealth and concealability, rather than raw firepower, and have a 60% chance of escaping detection when hidden under Realskinn™ or other suitable coverings. Weapons include:

Popup Gun: This is a standard automatic handgun concealed in a cyberarm. The action is mounted inside a pop-up housing which is covered when not in use. For this reason, you must always remember to uncover your arm when using a popup. Clips are inserted in the side of the action; popup guns are designed to use caseless ammunition only. The size of the cyberarm (based on Body Type) limits the size of weapon which may be mounted (similar to hidden holsters). Note: you may elect to mount any pistol of the correct size listed in the Outfitting section. A light SMG equals a Med. pistol and a medium SMG equals a Hvy. Pistol for this purpose.

Flamethrower: This is a small, high-pressure flame jet with a range of 1 meter, and 4 shots. Damage is 2D6 the 1st rnd., 1D6/2 for 2 rnds. afterwards. Soft armor is reduced 2 levels per attack.

Micromissile Launcher: This launcher contains four miniature missiles (explosive tipped gyro rounds with heat seeking guidance and steering vents). Like the popup gun, the micromissile

POPUP GUN SIZES

V.Weak to Weak:
Light Pistol only

Average to Strong:
Medium Pistol or Light SMG

Very Strong:
Heavy to Very Heavy Pistol,
Med. SMG or built-in
Shotgun (2sht., 1/2 range)

launcher is stored in the limb and pops out when needed, launching two missiles per turn. The missiles are self-guided (+2WA) and can follow a target through one direction change of 90° or less, giving them the ability to track around a corner (3 in 10 chance of losing target). Reloads cost 50eb each. Damage is 4D6 per missile, range 200m.

Grenade Launcher: This launcher is a modified support grenade launcher, stored in a popup mount. One grenade (you may use any standard type) is stored in the launcher; a reload may be dropped in after the first one is used. Note: a standard storage space can hold 2 grenade.

Weapon Mount and Link: This is an heavy duty hardpoint mounted either on the underside of a cyberarm, the outside thigh of a cyberlimb, or the top of a shoulder. You may attach externally mounted versions of standard weapons to this mount, jacking their control cables into the side of the hardpoint. You may not wear armor or clothing on the limb while the mount is in use. Available weapons include:

Grenade Launcher
Micro Missile Launcher
Externally Mounted Autopistol (based on body type)

2 Shot Capacitor Laser: This micro laser is designed to produce a very powerful pulse of limited duration (3D6 for each one second shot). Range is atrocious (10meters), and recharging requires plugging into a power socket for one hour. However, it can be a particularly effective weapon for assassination or silent attacks. WA=+3

Linear Frames

Linear frames are the 2020 version of the exoskeleton. An exoskeleton is basically a metal framework with synthetic muscles for movement; you sit in the exoskeleton and steer while it does the work. Early exoskeletons were rarely used for anything important; clumsy and hard to control, hapless operators often tossed half-ton cargo modules through walls and ripped loading doors off hinges. It was not until the advanced bio-feedback systems of the 2000's that the more practical linear frame could be developed.

A linear frame resembles a suit of contoured metal body armor. The frame is

grafted onto your body, while its systems are directly neurolinked to your muscles and bones. Linear frames are designed to take over a *percentage* of the load, while leaving you enough "work" to allow you to gauge how much you're lifting and maintain control of the weight.

For example, if you exert enough force to lift ten pounds, the linear frame provides no more power than would be required to move its own bulk. If you lift a hundred pounds, the linear frame splits the difference, lifting 20% of this mass so that you lift 80 lbs. If you lift 500 pounds, the linear frame takes 80% (400 lbs), leaving you to lift 100lbs. At the top end of the scale (almost 1800 lbs for Linear Ω), the frame lifts 90% of the weight, while you only lift about 180lbs.

But hey, you didn't come here for a physics lesson, right? You wanna know how much you can pick up and throw around.

Linear frames come in three **strengths**. When using the linear frame, you will use its strength value instead of your normal Body Type value for any lifting, bending, carrying or breaking task. Remember; for all their advanced construction, implanted linear frames are still quite heavy (50-100 kg) and bulky. You can't swim in them, and they have a -1 penalty to your REF. But if you want to toss a car out of the way, they're just the ticket. All linear frames lift 50x their Strength value. (Example: Σ can dead lift 600 kg.)

Frame	Strength	Damage Modifiers
Linear Σ	12	+4
Linear β	14	+6
Linear Ω	16	+8

Ω=Omega β=Beta Σ=Sigma

Body Plating

Body plating covers any situation where armored plastics and metals are layered over and directly anchored to the skin. The armor is microscopically porous, allowing the skin underneath to breathe, and made by sandwiching an ablative plastic shell with energy absorbing microcellular honeycomb.

Body plating doesn't make you any stronger or faster, but it's perfect for the cyborg who wants all over protection all the time—and doesn't care who knows it. It is the ultimate expression of the "metal is better than meat" philosophy; the body-plated look more like robots than they do humans, and are impervious to most of the physical damage that besets us mere mortals. Body plating also includes specialized mounts for sensors as well as body armor.

Body plating is sold in parts, each covering a specific area. It may be placed directly on the skin, or layered over a linear frame exoskeleton for the ultimate in cyborg chic.

Cowl: This is a body plate that covers the skull. It is anchored by minibolts to the scalp, and resembles the old skullcaps from bad science fiction or fantasy epics. SP=25.

Faceplate: The standard faceplate covers the entire face, with ports for breathing, eating and seeing. The armored plastic material is woven with fine myomar muscle fibers and is relatively flexible. Facial nervelinks allow limited (and somewhat stiff) changes of expression. This modification doesn't *have* to be ugly; many people find the silvery contours and smooth features quite attractive; somewhat like the "sexy robot" airbrushings of the late 20th century. However, many cyborgs like to have their faceplates sculpted into bizarre and often frightening images; monsters out of mythology, or terrifying robotic shapes. It's up to you. SP=25

Torso Plate: This section covers the entire upper and lower torso, back and front, with expansion joints at the sides, groin and waist to allow free movement. (SP=25) Reduce your REF by -3.

Front Optic Mount: This mount allows up to five cyberoptics to be installed in a shielded cluster in the upper face. The eyes are removed and the orbital sockets used to mount the receiver hardware for the optic mount. Optic mounts come in several styles: there are thin visor slits (ala Robocop), rotating camera clusters (like an old fashioned movie camera), or one main optic with smaller ones arranged in a circle around it. Needless to say, this really screws up your attractiveness stat, automatically reducing it to -1.

Sensory Extensions: These are flattened antennae and optic mounts, about a foot to two

feet long. A single cyberoptic and a microphone are mounted in the tip, allowing you to observe things around corners without sticking your whole body into the line of fire. Sensory "booms" are usually mounted on the head or on the upper spine.

Running Out of Cash?

Just about this time, you're starting to look over the list of cyberenhancements, and you're thinking, "I don't have the kind of Eurobucks I need to swing this newtech." At this point, you have to ask yourself "How desperate am I? Am I really hard up enough to risk death and dismemberment just to get a lousy cyberarm?"

Sure you are.

The truly desperate turn to desperate measures. In this case, you can hire yourself out to someone who can afford to buy your cybernetics for you. **Selecting any one of the following employers is worth 10,000 Eurodollars in cybernetics, free of charge:**

Join the (Covert) Military

Become a fighter in the Cyberwars, serving your country's armed forces with distinction and honor as part of its secret Elite Mechanized Combat Forces (Cybergrunts, to you). See pain, torture and death close up, as you participate in any one of a hundred covert "police actions" worldwide, protecting "national interests". Of course the Cybergrunts don't exist. Of course your country doesn't send teams of heavily armed covert agents into other countries to kill and foment revolt. Of course they're not going to let you quit when you want to.

Take Up a Life of Organized Crime

The word on the Street is that the Mob is alive and hiring. Swear allegiance to one of the big time organized crime Families and you'll never lack for cybertech. The only catch is, you have to do "work" for them. Bill collecting. Assassinations. Murders. Mob wars. The Families of 2020 have a long and honorable tradition that goes back into the early twentieth century: nobody ever quits the Mob. Ever.

"By the second tour, I didn't mind too much. We were makin' good time against the Sandies, and the new cyberarm paid it's way in the first two firefights. Then the recon AV went down over some little pesthole in the Nicaraguan jungle, and when I woke up again, I was legless from the hip. They gave me a choice—disability with a wheelchair, or two legs and another tour. You can see how I went..."

—Ripperjack

"We own you, Banner. Body and soul. We don't care how much metal you have, or how many friends you can call on. When we want you, you better come running, and you'd better pray that we don't have to come looking for you first. Because you're Company property, and we can do anything we want with you..."

—Boardroom conversation, 2020 AD

Sell Out to a Corporation

Join a Corporation and see the world. While you're at it, they'll bankroll you for ten thousand dollars in newtech. But remember, with all business deals, there's a price. In this case, you have to work for the Corporation. The jobs you get to do are all the fun, suicidal ones on which they don't want to waste their good people: executive kidnappings, black operations and espionage missions. If you're really lucky, you'll even get to be a grunt in a Corporate war—you know, the ones that make Vietnam and Afghanistan look like picnics, where you get to defend the Corporation's interests in some backwater hellhole with a population of natives you're suppressing.

Big business is fun.

The Catch

Like most "free" offers, these employment opportunities are boobytrapped in creative and dangerous ways. Each requires that you work for an indeterminate amount of time (forever) for people you may not like. You'll have to do what they tell you, no matter how cruddy, dangerous or suicidal. Like most powerful people in the Cyberpunk future, they don't like to be crossed, and have a variety of awful ways to ensure your "cooperation":

Hostages: To ensure your good behavior, the controlling agency is holding someone you care about hostage. You mess up, they die—or worse.

Blackmail: Somewhere in your past, you did something you can't afford to let out. It could be as small as cheating on your taxes (with a 20-year jail term), or a murder rap. It may even be fictional—created by your new employers to make sure you toe the line. Are you willing to take the chance?

Sabotage Chipware: To make sure you stay in line, the controlling agency has buried lethal glitches in your cybernetic software. Things to make your heart stop on command. Programs that give you blinding headaches if you refuse to follow an order.

Monitored: Your employers have implanted

sensors or other monitoring devices on you—just to ensure your loyalty. You can't say or do anything without them knowing. You can't go anywhere without them finding you. The worst part is, you don't know where in your body they've hidden these devices.

Command Kill: A really vicious sabotage chip—on the command word, you will kill whomever you are directed to kill—without control, regret or mercy. Your mother. Your lover. Your cat. Anyone.

Company Safeguard: Another nasty sabotage chip. You can't willingly harm any member of the controlling agency—to do so will cause you excruciating pain. To continue will cause even more pain, culminating in full heart stoppage and a screaming death.

Remote Detonator: One of the favorite corporate tricks, this is a small package of inert explosive buried somewhere in your body, activated by a remote radio signal. You don't know where they put it, the scanners can't find it, and if you did go around looking, you're likely to set it off (60%). Wanna bet your life, cobber?

Sounds fun? Remember, if you join one of these groups, any one (or more) of these little goodies applies directly to making you a puppet of your employers. What you are forced to do, and what they hold over you, is up to the Referee. He doesn't even have to tell you. You don't have a choice. You just sold your soul.

Welcome to 2020, smartboy.

SECTION **7** FRIDAY NIGHT FIREFIGHT

Friday Night Firefight (FNFF) is a weapons combat system for using modern, futuristic and archaic firearms in *Cyberpunk* adventures. It's designed to cover all major elements of weapons combat in an easy to use format, allowing realistic firefight action without resorting to lots of tables and charts. FNFF also covers melee weapons, hand to hand combat and martial arts as well, all in a simple system that allows you to use strategy over firepower.

There's a lot of vague ideas and theories about modern weapons encounters—most of them from the Hollywood Never-Empty-Six-Gun-School of Armed Combat. These misconceptions have

crept on little flat feet into the design of many roleplaying games, leading to characters who can be repeatedly shot with large caliber handguns until they run out of "hit points" and who can fire Ingram MAC-10's one-handed and hit with every bullet.

In otherwords, good, clean fun.

FNFF is not good, clean fun. Most of the data herein has been compiled from ballistics reports, police data, FBI statistics and other not-clean fun sources. These sources tend to point to a couple of basic truths about firefight combat.

80% of most gunfights occur between

untrained amateurs at a range of 21 feet. 40% of these raging gun battles happen within 8 feet or less! Most (60%) occur in dimly lit and difficult conditions— dark, rainy alleys, with both participants panting and out of breath, pausing momentarily to snap off a badly aimed shot at a fleeing shadow, then ducking back for cover. Hits are surprisingly rare. When they do occur (assuming a large caliber weapon's involved), the victim is usually hors de combat on the first shot from a combination of wound- shock and terror. A solid hit with a .44 magnum will usually splatter a real person all over New Jersey.

On the other hand, this is *Cyberpunk*, right? So why are we telling you all this if we don't intend for you to go in there with guns blazing? If a large caliber handgun is truly something to be respected, who wants to lose character after character until they get the point?

Here's where we get interfaced, gangboys. We've made this edition of FNFF simpler, faster and more direct, so you can concentrate on how to fight; how to win every encounter (you'll only get to lose once). We're going to give you all the tips we've learned over hundreds of our own encounters, plus hot tips from cops, combat grunts, SWATmasters and other veterans who've put it on the line for real.

It's true— a firefight is dangerous. But you can handle it. That's why you're *Cyberpunk*.

THE BASICS

Rounds & Turn Order

Combat in FNFF is divided up into **rounds**, each representing @3 seconds. Every round, each player gets to do something. The order of the round is based on an initiative roll of 1D10 plus the players REF stat, with highest rolls moving first to lowest rolls

moving last. Reflex boosts are added to this roll where applicable.

**INITIATIVE= ROLL 1D10+REF.
HIGH ROLL FIRST.**

Example: Players A, B and C all have REF stats of 10. A rolls a 5, B rolls an 8, and C rolls a 2. Turn order will be B, then A, then C.

Wait For Your Turn

You can elect to act later in the round, stepping in at any point to act. If you have elected to wait until another player's turn has come up, you will be able to act after they have taken their turn in the round.

Example: Turn order is player A, then B, then C. Player A decides to wait until player C has moved from cover, then take his shot. By waiting, the new turn order will be B, C then A.

Party Initiative

You may want to speed up your play by designating one member of the group as the party leader and have him roll initiative for the whole group. His roll is added to REF scores of everyone in the group to determine when each member of the group will act.

The Fast Draw or Snapshot

By declaring a **fast draw** (aka *snapshot*) at the start of the round, you automatically add +3 to your initiative roll, taking a -3 penalty to hit (you're rushing into combat instead of preparing carefully). You also may not take advantage of scope, sights or other aiming advantages. The martial arts or melee version of this technique is called the *iai-jutsu* or ightning strike.

**FAST DRAW= +3 TO
INITIATIVE, -3 TO HIT**

SO WHAT GOOD IS REFLEX BOOST?

Plenty. Them what goes first, kills first (or at least have the option of acting first). Most firefights start and end in only a couple moments. Which is one reason why you may want to think twice before you just haul out a gun.

The other reason boosts are worthwhile is that they make you harder to hit— you're moving so fast, it's hard to draw a bead on you.

WHY SOLOS ARE PARTICULARLY BAD NEWS

The advantage of the Solo is *Combat Sense*. For each level of *Combat Sense*, you'll add +1 to your Initiative rolls. Between Solos, this advantage is going to even out, but when Solos meet other types of characters, look out.

Remember: Solos are the equivalent of hired killers, and killing is what they do best.

AWARENESS OPTIONS

One way to make Awareness rolls a real surprise is to have your players make ten Awareness rolls before the game commences. Write them down in order for each player. When an Awareness roll is required, go down the list in order, checking to see if the rolls are high enough to succeed. The same table can be used over and over again by rolling 1D10 at the beginning of a new combat, then reading the list starting at the rolled number (ie: you roll a 5. You will start your new Awareness rolls at the 5th check, going through the rest of the list in order of 6,7,8,9,10,1,2,3,4,5.

	A	B	C	D	E	F
1						
2						
3						
4						
5						
6						
7						
8						
9						
10						

Example: Ripperjack is faced with his long time enemy, Hargan. He knows Hargan has a higher REF than he does, so he elects to make an all out, blazing attack before the giant can get in a move. The snapshooting bonus will give him the +3 advantage he needs. Ripperjack's mono-katana arcs out in a searing iai-jutsu before Hargan can raise his own sword. Unfortunately, the -3 point penalty for snapshots works against Ripperjack, and his attack misses his opponent by a mile.

Actions

During your part of the round, you may perform one **action** without penalty. This includes:

ACTIONS

- **Move up to your full Movement (3x your Movement Allowance in meters) per round.**
- **Attack up to your weapon's maximum Rate of Fire (ROF), or make a Melee attack.**
- **Dodge (making yourself harder to hit. Melee attacks only.)**
- **Parry (deflecting damage onto something else.)**
- **Escape a hold or trap.**
- **Aim (gaining +1 to hit for every consecutive turn of aiming up to 3 rounds)**
- **Reload or change weapons.**
- **Mount or dismount from a vehicle.**
- **Repair or give Medical Aid.**
- **Perform a non-combat task.**

More Than One Action

You may perform more than one action at a -3 penalty to each successive action.

Two Weapon Attacks

Two weapon attacks can be made at a -3 to hit penalty on both weapons used.

Ambushes & Backstabs

Sometimes, the best way to deal with a very powerful opponent is to get the drop on him from behind; in short, setting an

ambush. Ambushes gain a +5 to hit advantage. You may ambush or backstab by announcing your intent to hide or lie in ambush for a target. You can elect to set up an ambush any time:

a) The opponent is unaware of your location and your intention to attack. This can be accomplished by setting up a hiding place ahead of time or taking advantage of a melee to get under cover and waiting for a shot. A victim of an ambush must make an Awareness roll greater than your *Stealth Skill*+*INT*+1D10, or you have automatically succeeded.

b) The opponent's attention is on another situation, such as another attack or a task requiring great concentration. This can be accomplished by creating a distraction for your opponent, or by sneaking up on him while he is in combat with another combatant.

AMBUSH=+5 TO ATTACK FOR 1 ROUND

An ambush doesn't mean you act first—it just means you have an attack advantage. Initiative for the round is made as usual, and the ambushing character can spring the trap on his part of the round or can wait to see what develops before making his attack. Until the attack is made, his opponent may not attack him, because he doesn't know he's in danger. An ambush may only be used for one attack; another ambush must be set up before the bonus can be employed again.

Example: Ripperjack decides to set up an ambush in a dark alley of the City. He rolls his Stealth Skill+Int+1D10 for a total of 18. Along come Scarr and Hargan, his mortal enemies.

At the start of the combat turn, initiative is Scarr, Ripperjack and Hargan. As they enter the trap, both Scarr and Hargan make Awareness Rolls. Scarr's roll is 12; Hargan's is 20. "It's a trap!" yells Hargan, but too late; Scarr didn't know what was coming and couldn't declare an attack or defense. Ripperjack pegs him with a shot from his H&K Hellfire, using the +5 Ambush bonus. He won't get the bonus on Hargan, because the blond giant

made his Awareness roll and spotted him. His second shot misses, and Hargan throws himself down behind a wrecked car and opens up with his 20mm autocannon. Savage fades down the alleyway to set up another trap.

Line of Sight and Facing

Whenever you are facing your target and have a clear path between you, you can attack. You can clearly see anything forward of your shoulders. Illustrations of clear paths and facings are on pg. 107.

Damage

Damage in combat is determined by rolling groups of six-sided dice. If a rule says, "roll 2D6", for example, you would roll two six sided dice, total the results, and apply the total to the target you were attacking. If the rule said "roll 2D6+1", you would roll as above, then add 1 to the total.

So much for creating damage. Let's take a step-by-step look at how to *apply* it.

Hit Location

The first step in applying damage is to figure out *where* to apply it. Most combat attacks are just barely aimed; you're looking for an opening, your opponent slips up, and you

take it. This means that unless you attempt to aim your shot at a specific location (and take the -4 penalty for this), you will have to determine where you hit on a random basis.

The **Location** section of your Hardcopy Form is designed for this; it lists all body areas with a value from 1 to 10 written underneath. When your character is hit, roll 1D10 and compare the chart number to the roll to determine where he has been hit.

Use some common sense with this rule; for example, if a character is standing behind a low wall, a roll of 7-8 (R.Leg) is pretty silly. Ignore it and re-roll.

Armor

Armor is what stops targets from taking the damage you just located.

The **Armor SP** section is

directly under the Location section on the Hardcopy. Write the Armor Stopping Power (SP) value for each body area in the space corresponding to that body area.

Stopping power (SP) refers to the ability of armor to stop damage. Each type of armor has it's own Stopping Power. When the armor is struck by a round, the armor's SP is subtracted from the total amount of

**"Rated SP20.
You can walk
through fire.
Just like the
holos,
choomba..."
—Unidentified Fixer
2015**

damage done by the hit. The remaining damage is then applied to the target area. If the damage done is less than the SP of the armor, no damage is done.

Example: Ripperjack is wearing a Kevlar jacket with an SP of 18. A 5.56 round strikes him in the chest, causing 14 points of damage. The armor's higher SP thwarts the attack. The next shot does 22 points of damage. The armor reduces this by 18 points. Only 4 points get through to cause Ripperjack harm.

Hard and Soft Armors

Body armors are divided up by whether or not the majority of their protection is based on rigid metals/ceramics/composites, or on softer, more flexible ballistic fabrics. This is done for layering purposes and for some weapon damage effects. The table below is arranged with heaviest protection at the top, lightest at bottom.

HARD/SOFT ARMOR TABLE

HARD ARMORS	SOFT ARMORS
Metal Gear	Heavy Armor jacket
Police riot armor	Med. Armor jacket
Door Gunner's vest	Police patrol armor
Steel helmet	M-78 RPA jacket
Flak vest/pants	Light Armor jacket
Ballistic Nylon helmet	Kevlar T-shirt/vest
M-78 RPA heavy vest	M-78 RPA T-shirt
Corp Mil body armor	Heavy Leather
C-Ballistic Light Mesh™	SkinTight™ armor padding

RPA=Militech Revised Personal Armor, AP-defeating, CorpBook 2 C-Ballistic Mesh, SkinTight Padding=Interface vol1, #1-2

Layering Armor: "What a concept", you think, shrugging into a bulletproof T-shirt, bulletproof vest and a Kevlar armor jacket. Theoretically, one should be able to layer protection upon itself until he becomes invulnerable.

Wrongo. First of all, let's look at reality. If the average cop could stack layers of armor on himself before tackling a domestic disturbance call, you can bet he'd do it. But he doesn't, because it just isn't practical. Here's why.

When you layer flack jackets, you aren't invulnerable; you're just immobile. While modern armor isn't as heavy as old fash-

ioned armor plate, it's very encumbering from the movement angle. Straps, buckles, padding and stiff plastic add up to restrict arm movement, chafe the torso, and weigh down the legs. Pillsbury-doughboy padded arms don't lift guns very well, and well-stuffed legs aren't much for bending, climbing and running.

For this reason, every armor type in *FNFF* has an *encumbrance value* (EV). When wearing body armor, add up the total of EV's (listed in the *Armor Table*), and subtract this from your character's REFLEX stat. Even if you're cybered up, a lot of armor is gonna cost you.

New Armor Rules:

These new rules (previously published in CP 2020 erratta sheets) have been added to clarify the armor question and deal with a reoccurring problem.

New Rule 1: Maximum Armor

Now, in addition to Encumbrance Values, only a maximum of **3 layers** of Armor can be worn at any one time; no more than **one** of these layers can be Hard Armor (see Hard/Soft Armors Table). The 2nd layer has an *extra* EV penalty of **-1**; the 3rd layer, an *additional* penalty of **-2**. *Subdermal Armor* and *Bodyplating* cyberware options are considered to be armor layers; *Skinweave* is considered a layer, but receives no penalty.

New Rule 2: Proportional Armor

When layering armor, or wearing armor behind an obstacle or cover, subtract the smaller SP from the larger one. Find the difference on the table below and read across to the other column. This is the bonus number you add to the **larger** SP to determine **overall** protection from the armor/armor, or armor/cover combination. If you have three or more layers of protection, calculate in pairs from the inside out. (example: For armors A, B, C, you compare A and B; determine the bonus number, and then compare the new strength of the larger of the pair to armor C.)

ARMOR

Let's clear up a couple things about ARMOR right now. When we talk about Armor Stopping power, we're not talking about whether the bullet (knife, club, sword, etc.) has actually gone *through* the armor. What we're really measuring is the abstract idea of whether any *damage* got through. This might not be an actual bullet or blade, but rather a bruised rib from a big slug or even minor concussive damage from a baseball bat.

In short, if the armor stopped the attack, this means that no harm actually goes through to the character, regardless of the fact of where the bullet ended up. Sure, even if a vest physically stops a .357 Magnum round, at pointblank range, you'll get some big bruises.

The idea of armor piercing also works into this; the chances that a knife will slice through the layers of kevlar are higher than for a blunt bullet, and this means that more of the knife will actually get through to your ribs. Armor piercing attacks are deadly because they can ignore modern armor's biggest advantage: the ability to spread kinetic impact over a wide area, slowing the bullet down and stopping it from actually entering the body.

Even blows and energy beams can be stopped by modern armor; made of composite fabrics and ceramic inserts, armor will tend to ablate under energy attacks, and absorb kinetic energy.

Write the SP (described in the **ARMOR SECTION**, pg.91), for the armor you're wearing over each body area. For example, an Armor Jacket covers your Torso and both arms in an SP of 16. So you would write 16 in the boxes for Torso, R. Arm and L. Arm.

When you take damage, subtract the SP of the armor from the amount of damage taken. The remainder, if any, is what gets through to YOU.

When taking damage, roll 1D10 to determine where you have been hit, comparing the roll with the numbers below.

Death Saves: When making a *Death Save* (anytime your wound state is at Mortal), you must roll your *Save* number minus the mortality level of the wound. For example, Mortal 5 means I would roll my *Save* number -5.

Location	Head 1	Torso 2-4	R.Arm 5	L.Arm 6	R.Leg 7-8	L.Leg 9-0
Armor SP						

SAVE	BTM	LIGHT	SERIOUS	CRITICAL	MORTAL 0	MORTAL 1
		Stun=0	Stun=-1	Stun=-2	Stun=-3	Stun=-4
		MORTAL 2	MORTAL 3	MORTAL 4	MORTAL 5	MORTAL 6
		Stun=-5	Stun=-6	Stun=-7	Stun=-8	Stun=-9

This is where you would write your *Save Values*. Both are equal to the number of points you have placed in your *Body Type* (for example, a *Very Strong Body Type* would be a 10, and have a 10 *Save* as well).

Your *BTM* stands for *Body Type Modifier* (see Page 93). Not all body types take damage the same. You will subtract this number from any damage you actually take.

This is your *Wound* section. For every point of damage taken, mark off one box, moving from left to right, top to bottom. The top row (Light, Serious, etc.), describes the current condition of the character; the bottom (Stun=0, etc.) tells what you must subtract from your *Stun Save* each time you take a wound. For example, *Stun 5* would mean subtract 5 from your regular *Stun Save* value.

PROPORTIONAL ARMOR TABLE

Difference in SPs	Bonus Number
0-4	+5
5-8	+4
9-14	+3
15-20	+2
21-26	+1
27+	+0

Armor Piercing Rounds

There's another reason why armor isn't the universal cure for flying lead, and it's called *Armor Piercing* (AP) rounds. These are bullets designed to deliver their full impact to a single point, instead of mushrooming out like a normal bullet. They don't cause as much damage as a standard lead or hollow point round (1/2 normal damage), but they cut through armor like a hot knife through cheese. As a result, whenever AP rounds are encountered, armor will have one half it's total SP value.

For example, say a 5.56 AP round causes 30

points of damage. It hits SP 10 armor, which reduces it by 5 ($10/2=5$). The remaining 25 points are further reduced to 12 ($25/2=12.5$, rounded down to 12), based on an AP round's lower damage capacity.

The same is true of knives, swords and other *edged weapons*. Note that armors marked with a check (✓) on the Armor Table are at half SP effectiveness against edged weapons.

The smart solution in a combat situation is to rely on the lightest armor you think you can get away with unless you're planning to take on a stationary position or go up against very heavy firepower.

Staged Penetration: Armor doesn't just keep absorbing damage indefinitely. One option is to use the concept of *Staged Penetration*. Each time the armor is struck by a penetrating attack (i.e., an attack that actually exceeds the armor's SP), it's SP is reduced by 1 point. When the SP reaches 0, the armor will no longer stop damage.

Use Cover

You don't have to lug around an armor jacket with you—often the best armor is what you can find around you. Cover allows you to move from place to place, letting something else soak up the gunfire.

COMMON COVER SPS

Sheetrock Wall	5
Stone Wall	30
Large Tree, Phone pole	30
Brick wall	25
Concrete Block Wall	10
Wood door	5
Heavy Wood Door	15
Steel Door	20
Concrete Utility Pole	35
Data Term™	25
Car body, door	10
Armored Car body	40
AV-4 Body	40
Engine block	35
Mailbox	25
Hydrant	35
Curb	25

The Body Type Modifier

The next step after Armor is to apply your character's **Body Type Modifier** to the damage. This is a special bonus which reduces the effects of damage, reflecting the stamina and general toughness of the character. Each time your character takes damage, **subtract** your Body Type Modifier from the total amount of damage before applying it to your character.

BODY TYPE MODIFIER TABLE

Very Weak	-0
Weak	-1
Average	-2
Strong	-3
Very Strong	-4
Superhuman*	-5

*Possible only with cybernetics

For example, say you took ten points of damage. If you were a Very Weak Body Type, you would take the full ten. But with a Very Strong Body Type, you'd only take $(10-4=6)$ six points of damage.

The A. Swenson Memorial *He Shrugs Off Damage Like An Old Overcoat* Rule: Occa-

sionally, you'll encounter a situation where the combination of armor and Body Type Modifier will seem to reduce the damage done to zero or less. A **Body Type Modifier may never reduce damage to less than one**—in these cases, the character will automatically take 1 point of damage.

Wounds

Okay, so the Armor didn't stop all of the damage, and your *Body Type Modifier* wasn't enough to shrug off the rest. It's time to take a *Wound*.

The *Wound* section of the Hardcopy Form is used to record damage. For each point of damage taken, check off one box, moving from left to right, top to bottom. The top line of this section (marked LIGHT, SERIOUS, CRITICAL, MORTAL, etc.) tells the overall state of the character's health.

WOUND EFFECTS

- At a LIGHT wound level, a character suffers no penalties to his activities. He just hurts a lot ("It's only a flesh wound...").
- At a SERIOUS wound level, the character will be at -2 to his REF stat for all actions. He's hurting, bleeding, and definitely hampered.
- At a CRITICAL wound level, the character's REF, INT and CL stats are automatically reduced by half (round up). The character is holding his guts in with one hand and doing his damndest to stay in the battle.

- If MORTALLY wounded, the character's REF, INT and CL stats are reduced to 1/3rd normal (divide by 3, rounding up). Most characters are already out of the action by now, and are quietly going about the business of expiring. Messily.

Special Wound Cases

Limb Loss: If a character takes more than eight points of damage to a limb area in any one attack, the area is severed or crushed beyond recognition. The character must make an immediate *Death Save* at Mortal 0. A head wound of this type will kill automatically.

Head Hits: A head hit always doubles damage.

DO UNTO OTHERS, BUT COVER YOUR BUTT

Remember that cover doesn't always mean automatic safety. If your target is hiding behind a wood door and you have a rifle, go ahead and shoot through the door; the penalties for blind firing won't stop you if you're at point blank range.

If he's behind a car door, so much the better; it takes an engine block to stop a serious bullet. If you think he's hiding behind the door of the apartment you're about to enter, make an *Awareness* check to see what side he's on, then shoot through that sheetrock wall.

When you're on the Street, make sure you not only know where cover is, but its general SP value. If the hit team comes down on you, make sure you have a Data Term to dodge behind—they make those things tough enough to stand an automobile crash. If there's no cover available, try lying in the gutter; curbs work great if they're high enough.

Also, check your lines of sight. Remember, cover doesn't count jack if the guy shooting at you is higher than you are. And don't neglect the power of suppressive fire as cover; sure, you probably won't hit at a long range, but the chance that you might will make him keep his head down.

Pay attention to this, punkers. The graveyards are full of real people who didn't.

KNOCKBACK

Okay, let's talk about *knockback*. You know, where you shoot the guy and he hurtles back ten feet, arms windmilling, to crash through a convenient plate glass window?

Unfortunately, this is another Hollywoodism. Why don't we have knockback? Blame Issac Newton's Third Law (of Equal and Opposite Reactions). The fact is, if you can deliver enough energy to knock a man off his feet, Physics says that the guy firing the gun will also fly back ten feet as well. And that just doesn't happen.

A real gun can't deliver that much energy anyway; a bullet hasn't got the *mass*. For example, a Winchester 458 Magnum Super X only delivers 4712 foot-pounds of energy direct from the muzzle (that drops off to 1200 ft-lbs past the first 500 yards). You can deliver more energy by hitting your target with a pair of nunchucks.

Okay, so what do gun experts mean when they talk about "stopping power"? What they really mean is the amount of tissue damage the weapon can cause on impact. The bigger and heavier the bullet, the more ripping and tearing damage it'll do, and the faster the target will drop from shock and tissue damage.

Which is what a Stun/Shock Save is all about.

Stun/Shock Saves

Every time a character takes damage, he must make a *save* against the effects of pain, shock, fear and blood loss. This is what you see in most Hollywood gunfights when the bad guy gets hit—staggering, falling back and so on, all caused by pain and shock (see the sidebar for a general tirade about the fiction of *knockback*).

The *Stun Shock Save* is a serious thing, because it can put an opponent out of the picture faster than the actual damage from the wound. Police officers have actually died from the shock of a minor bullet wound in the foot (but we won't do that to your character). Other people have taken as many as thirty or forty gunshots and managed to keep moving for up to *ten minutes* before their minds got the message their bodies were telling them ("Hey Bob, you're *dead!*").

The *Stun Save* is equal to your character's *Body Type* value, *minus* a penalty based on his current *Wound State*.

STUN/SHOCK SAVE MODIFIERS

Wound State	Penalty
Light	0
Serious	-1
Critical	-2
Mortal	-3
Mortal 1	-4
Mortal 2	-5
Mortal 3	-6
Mortal 4	-7
Mortal 5	-8
Mortal 6	-9

A failed roll means the character is out of combat. You can add the special effects yourself:

HOLLYWOOD OVERACTING EFFECTS TABLE

Roll	Effect
1	Screams, windmills arms, falls.
2	Crumples like a rag doll.
3	Spins around in place, falls.
4	Clutches wound, staggers and falls.
5	Stares stupidly at wound, then falls.
6	Slumps to ground, moaning.

A Stun/Shock roll can be recovered from by rolling a successful check in a subsequent turn.

Very Important: Death Saves

Unless you have taken a *Mortal Wound*, your character is in no danger of dying; he only needs to make his initial *Stun* save to remain conscious. But if the wound is a *MORTAL* one, he has a chance of dying.

Determining whether he survives requires that a *Death Save* be made, with a new save required every turn that the character remains untreated.

Like a Stun Save, a Death

Most characters are already out of action, and are quietly going about the business of expiring. Messily.

Save requires that you roll a value on 1D10 equal to or lower than your character's *Body Type* score, subtracting the level of severity for the wound from your base chance to save. *Mortal Wounds* are rated from 0 to 8.

Example: Hargan is Very Strong and takes a Mortal 4 wound. He must roll lower than (10-4)=6 to stay alive.

Each turn, you must make another Death Save to see if you survive to the next turn. On a successful roll, you make it; on a failed roll, you will die at the *end* of the turn in which the roll was made.

Sooner or later, you'll fail a roll and die. The only way out is **stabilization**.

Stabilization means the patient is no longer losing blood and that his major damage has been contained through use of drugs, battlefield surgery and/or wound dressing. A stabilized character will no longer be required to make Death Saves each turn. Anyone (except the patient himself) can attempt to stabilize a mortally wounded character; it just works better if the physician has had some medical training. A lot better.

A successful stabilization is made by adding your TECH stat, any Medical Skill and one D10 for a result equal to or higher than the total number of damage points the patient has taken. *For example, Ripperjack has taken 20 points of damage, placing him in a Mortal 1 Wound State. To stabilize him will require a roll of 20 or greater.* Once stabilized, the character is no longer in danger of dying unless another wound is taken. At this point, the whole messy business begins again...

The chances of a successful stabilization roll can be increased by the following modifiers, added to your die roll.

Advantage	Add to die roll
Full Hospital & Surgery	+5
Trauma Team Ambulance	+3
Life Suspension Tank	+3

Assuming you make your stabilization rolls, you're going to survive to fight again. If you fail, no problem, that's why we have Body banks. Either way, to learn more about **healing** or **spare parts brokering**, check out the *Trauma Team* section, pages 114 to 125.

Making Attacks

This section covers the basics of how to make attacks. There are two parts to this section: RANGED WEAPON COMBAT and MELEE COMBAT.

Ranged Weapons

Ranged weapons are anything that is shot or thrown over a distance at the target. To **make a ranged weapon attack** (guns, bows, thrown objects, etc.) you must roll a combination of your:

**REF STAT+WEAPON
SKILL+1D10**

equal to or greater than a specific **hit number**. The hit number is determined by the range between you and your target.

HIT NUMBERS

Point Blank	10
Close	15
Medium	20
Long	25
Extreme	30

Range Definitions

- **Point Blank:** The weapon is very close to or in actual physical contact with the target. It will almost always hit, doing maximum damage.
- **Close:** The weapon is attacking at one quarter of the listed range.
- **Medium:** The weapon is attacking at one half of the listed range for its type.
- **Long:** The weapon is attacking at the listed range for its type.
- **Extreme:** The weapon is attacking at twice the listed range for its type.

Modifiers

When making your roll, you must add any and all **modifiers** that apply to the combat situation to your final *Attack Roll*. There are modifiers for Target, Aiming, Weapon Type, Type of Firing, Position and Movement, all listed on pg. 99.

Aiming

One way to improve your chance to hit is to aim. Each turn of aiming adds +1 to your *Attack*, up to three rounds. Aiming assumes steady position, no movement, and a clear chance to track your target.

Critical Success

On a natural roll of 10, you have had a **critical success**. Roll an additional 1D10 and *add* it to your original roll.

Fumbles

On a natural die roll of 1, you have **fumbled**. You must roll an additional 1D10 and check the result against the *Fumble Table* pg. 43) to see what happens.

Fumbles can encompass a wide variety of effects. Most weapon fumbles include jamming or misfires.

Automatic weapons have the highest chance of fumbling, and will jam based on

"Tonight's Body-Lotto scores just in. In the South Side Combat Zone, 13. North Highlands and University District, 4. And this just in—a light plane crash at Night City Metro Airport with no survivors. Winners for tonight are..."

—Nightly News Program, c. 2020

"It's not just having an automatic weapon that makes you a hard case. It's knowing how to use that weapon effectively. A good combat gunner can deny an area, rake a group, or put a single round dead on target. And never run out of ammo doing it."

—Morgan Blackhand

the Reliability of the weapon: When a fumble is rolled while using an automatic weapon, ignore the table on pg. 33, and roll a value on 1D10 higher than the Reliability value for the weapon.

RELIABILITY TABLE

Weapon	Jams on
Very Reliable	3 or lower
Standard	5 or lower
Unreliable	8 or lower

It takes 1D6 turns to unjam a jammed weapon.

Automatic Weapons

There are three ways to use automatic weapons. The **three round burst** is used to put multiple shots on a single target at any range. **Full Auto** is used to deliver a lot of bullets at close range to one or more targets. **Suppressive fire** is used to force an opponent to keep his head down or risk taking a slug. Each form has its own advantages and disadvantages in combat, and the smart street warrior knows when to use the right technique for the right job.

"I was in the War. I Like lead. Lots of lead."

—Dr. Halman Thompson, WNS Reporter

Three Round Burst

The **three round burst** is a setting used on most automatic weapons to conserve ammunition and improve accuracy. The three round burst gives you an automatic +3 to hit advantage at certain ranges. The attack is made as one action. If successful, roll 1D6/2 to see how many rounds actually hit the target. This technique may only be used against single targets.

3 ROUND BURST= +3, CLOSE & MEDIUM ONLY

Full Auto

This attack is best used to cover a wide range of targets or to make sure a single target is dead, dead, dead. A weapon on full auto is a bucking bronco; hard to hold on a target more than a few meters away.

Using a scope or taking aim is also impossible. Therefore, range is critical in the full auto technique.

The **full auto option** is based on the rate of fire (ROF) of the weapon. If attacking more than one target, you must divide the ROF of the weapon by the total number of targets (round down), then roll for each target individually.

FULL AUTO RULES

At Close Range:

For every 10 rounds fired at Close range, add 1 to your Attack Total.

At Medium, Long and Extreme Ranges:

For every 10 rounds fired at Medium, Long and Extreme ranges, subtract 1 from your Attack Total.

For every point of success over the required to Hit roll, one round hits the target, up to the maximum ROF for the weapon.

NUMBER OF HITS=# POINTS > THAN TO HIT NUMBER

Suppressive Fire

Suppressive fire is used to cover an area (called a **fire zone**) with bullets, making the area hazardous to pass through. All targets entering or crossing the fire zone during this attack must make a "save" against taking a bullet by rolling their **Athletics Skill+ REF + 1D10** and beating a save number. A failed save means the target takes 1D6 rounds, each randomly located.

This save number is determined by dividing the total number of bullets fired by the width of the fire zone.

Example: 64 rounds into a 2 meter area would require a save of 32 or higher. 64 rounds into a 5 meter area would require a save of 12 or greater.

SAVE= NUMBER OF ROUNDS DIVIDED BY THE WIDTH OF THE FIRE ZONE IN METERS

You may overlap the fire zones of more than one weapon, dividing the total num-

ber of shots to determine the save number. For example, two Uzis with an ROF of 32 would place 64 bullets into the fire zone.

Two rules are immediately apparent with suppressive fire. First, it's only useful when you can fire a LOT of rounds into a small space. This means teams should coordinate their actions and fire at the same time, placing the maximum number of rounds into the fire zone. Also, the fire zone should be as tight as possible (the minimum width of a fire zone is two meters).

Unusual Ranged Weapons

These weapons are often used for crowd control, stealth missions and other situations where you want killing to be only one of the options, or where you want a limited number of targets eliminated quietly.

Airguns

These are advanced versions of the "paintball" guns of the 1990's. Airguns can be loaded with poison, marking paint, drugs or acid.

Paint: Bruise damage only. Head hits have a 5 in 10 chance of blinding the target for 3 rounds with paint in the eyes, and a 4 in 10 chance of permanently destroying the eye.

Poison & Drugs: To avoid the effects, the character must make a save roll. On a successful save, damage is reduced by half.

DRUG & POISON EFFECTS

Type	Effect	Damage
Hallucinogen	Confusion	-4 INT
Nausea Drugs	Illness	-4 REF
Sleep Drugs	Sleep†	None
Biotoxin I	Death	4D6
Biotoxin II	Death	8D6
Nerve toxin/gas	Death	8D10

†Half effect is drowsiness, -2 to all stats.

Acid: Acid causes 1D6 in acid damage per pellet. Although armor will stop this, the acid will eat away at the armor, reducing its SP by 1D6 per round, for a total of 3 rounds.

Example: Ripperjack hits armor SP 15 with two pellets. He rolls 2D6 for a total of 7 points of damage. The first turn, the armor's SP is reduced to 8. The next turn, it's reduced to 1. The next turn, 6 points get through the armor and sear into the target's skin.

Tasers

Tasers require the victim to make a save against stun (see *Saves*, pg. 104). The save number is reduced by -2 for every successive shot in a three-turn time period. Tasers can be recharged from wall current, taking 1 hour to reach full charge.

DO UNTO OTHERS, THEN SPLIT

You don't have to tackle that 400 lb. cyberpsycho with a handgun. Get sneaky. Shoot from rooftops, then fade. Use a high powered, scoped rifle to take on that Euro-solo. String some mono-wire at neck height between two posts then bail that Nomad Gang into trying to run you down.

In short, never tackle something head on if you can do it quieter and neater another way.

You Referees paying attention? They're going to use these tricks on you.

Now you're ready for 'em.

Dart and Needleguns

Dartguns can be loaded with poison or drugs. Each hit does 1D6/2, plus effect of the drug or poison used (see *Airguns*, above).

Power Squirtguns

Power squirtguns can be loaded with drugs or acids. Effects are as with *Airguns* (above), with each "squirt" equal to 2 pellets.

Bows, Crossbows, Spears & Throwing Stars

Although they are not common, **bows, crossbows, spears** and **throwing stars** are available in the 2000s. These weapons are either thrown (using the character's *Throwing Skill* for shiriken, darts, knives and spears), or fired (using *Archery Skill*). All non-grenade thrown weapons have a range equal to the thrower's BODx3 in meters.

Beam Weapons

Beam Weapons include **lasers** and **microwave** weapons. Powerful beam weapons are extremely rare in the *Cyberpunk* universe (1 in 10 chance of availability, and even then only from major Corporations and/or governments).

Lasers

Lasers have a rechargeable powerpack holding a total of 10 six sided dice of damage. You can use as little as 1D6 or as much as 5D6 in a single shot, until you have used all 10 dice. Lasers recharge from wall current at a rate of 1D6 per hour.

Example: Ripperjack has recently captured a laser from an Arasaka guard. He has 10D6 to work with; he dials the powergrudge up to 5D6 and fires. At this rate, he'll only have one more shot before it's recharge time.

Microwavers

Microwavers are fired like any other ranged weapon, delivering 1D6 in burn damage. In addition, any target within 1 meter of the path of the beam must roll 1D6 on the microwaver side effects table to determine if there are electrical side effects on exposed cyberwear. Shielded cyberwear is not effected by electrical side effects.

Like lasers, microwavers recharge from a wall socket, taking one hour to reach a usable charge.

MICROWAVER SIDE EFFECTS

- 1 Cyberoptics short for 1D6 turns
- 2 Neural pulse! If character has interface plugs, reflex boosts or other hardwiring, REF stat reduced by 1D6/2 until repaired.
- 3 Cyberaudio shorts for 1D6 turns
- 4 Cyberlimb malfunction: Lose all use of cyberlimb for 1D10 turns. Roll 1D6 for limb, re-rolling if no cyberlimb limb is present:
 - 1-2 Right Arm
 - 3 Left Leg
 - 4 Right Leg
 - 5-6 Left Arm
- 5 Total Neural breakdown! Character reduced to twitching, epileptic fit for 1D6/3 turns.
- 6 No Effect.

Area Effect Weapons

Area Effect weapons are fired just like any other type of ranged weapon. However, they are capable of covering more than one target at a time with a cloud of pellets, flame, explosive force or gas. Area effect weapons include **shotguns, grenades & explosives, flamethrowers, missiles & rockets, mines** and **rocket powered grenades (RPGs)**.

Attacks are made as with other ranged weapons, with the *center* of the area effect falling on the designated target, and anything *within* the area of effect taking damage as well. If the target is missed, the true center of the attack must be determined. When calculating where a grenade or other Area weapon has hit, roll 1D10 to determine the direction on the Grenade Table, then roll a second D10 to see how many meters away it hit.

Shotguns

Shotguns fire a cloud of small metal pellets called a "pattern". The width of the pattern is based on the distance between the attacker and the defender. Any target in a straight path between attacker and intended target is also considered to be in the area of effect. Note: if something is between the path of the shotgun and its intended target, the intervening spaces behind that object are considered to be exempt from the effects of fire.

SHOTGUN TABLE

Range	Size of Pattern	Damage
Close, PB	1 meters	4D6
Medium	2 meters	3D6
Long	3 meters	2D6

Any target within the pattern will take damage based on the range (damage listed on the Weapons Table on pg. 51 is based on maximum damage).

Example: Ripperjack opens up his shotgun on two boosters at medium range (pattern width=2m). He hits the first booster dead on. However, the second booster is within 1 meter of the first—the pattern overlaps him as well. Both take damage.

Shotguns are a very effective weapon in situations where aiming isn't critical. For instance, in six foot hallways, there would be no way for a target to escape taking wounds no matter how much his reflexes were boosted. However, shotguns are also limited to relatively short ranges and don't do a lot of damage on the individual pellet level.

Autoshotguns: One of the nastiest house to house weapons is the **autoshotgun**. In combat, you may make as many attacks as your weapon's rate of fire on Full auto. All

shots must be within 1 meter of each other. Each attack has a -2 penalty for every additional shot past the first. However, when this means you can put five two-meter clouds of lead all over an area, a -4 or -6 penalty is a small price to pay. Autoshotguns are slow, bulky and have lousy range, but they are hell on wheels when it comes to house to house, short range combat.

Example: Ripperjack opens up with a CAWS, firing 5 shots. He takes a -8 penalty to his attack roll to do this. He targets a 5 meter hallway, spacing his shots in 1 meter intervals. The hallway becomes Hamburger Heaven.

New Rule: The Armor-Piercing Effects of Shotgun Slugs

These projectiles have normal AP ability vs. all armors. Damage that penetrates **Hard** armor is **not** halved. Damage that penetrates **Soft** armor is halved as normal. This represents the concussive results of mass and impact by finned/saboted slugs.

10ga. slugs	5d6+3
12ga. slugs	4d6+2
20ga. slugs	3d6+1

Grenades

Grenades come in **fragmentation**, **in-**

DO UNTO OTHERS, THEN CUT THE CARDS

Always make your enemy play the Game your way. Lure him into chasing you. Pick a place where you can see him coming. Stash some food and ammo for a long stay, if need be.

Smart Punks always have at least a dozen hideouts set up. Don't always go to the same one, or one night, you're going to crawl onto your sleep-mat and BOOM! (See page 100). But make sure you can hole up when you have to.

One slick trick is to bury your best bolthole in the territory of your enemy's worst adversary; say, hiding from Arasaka in the middle of a Militech training camp.

Let *them* do the work.

"Yo, man, you be wantin' twenty five incendiaries an' a couple o' frags, yeah? No problem."

DO UNTO OTHERS, THEN LOOT THE BODIES

Got a team in hot pursuit? Here's a trick. Before you go into the sharp end, plant a few claymores along your escape route. Put 'em under some trash or dirt, and mark the locations with a can or something. When you make your retreat, you dodge the mines and let the lunchmeat on your trail walk the line.

Boom.

Another trick from the School of Low Blows and Assassin's tricks. Got a standoff situation? You can't get them out and you can't get in? Distract them while your mates get to all the doors and windows and set up tripwired claymores. Then, just go away.

Eventually, they'll have to come out.

Boom.

Here's a freebie. Tired of stalking that heavy hitter on the Street? Find out where he sleeps. Put a mine under his mattress (gently...), then to make sure, tripwire it to one end of the box springs. He'll either sit on it, or he'll flip the mattress back to check for traps.

Too late. Boom.

cendiary, stun, dazzle, sonic, concussion and **gas** varieties. Each type has its own area of effect, usually between 2 to 5 meters. Grenades and explosives can be detonated using timers, radio controls, tripwires or remote detonators. All grenade types are available in hand or rifle-propelled versions, and are described in the **Area Effect Weapons & Grenade Table**, pg. 89. Grenades may be thrown up to 10x the character's Body Type in meters (-10m for every extra kg. past the initial 1), or launched to a range of 225 meters.

Gas : Gas differs from other grenade effects in that it moves around. To use gas, first determine the point of impact. All targets within 3 meters are immediately affected.

On the next turn, determine which way the wind is blowing by rolling again on the Area Effect Table. Place the new area of effect. Any target within the first and second areas of effect must save vs the gas, as well as any targets in a straight line the width of the gas cloud between the two points. On the third turn, the gas dissipates.

Gas grenades have either fatal or incapacitating effects. To avoid the effects, the character must make a save; armor doesn't help (although filters or gas masks will). On a successful Save, he will take half effects (a -2 REF reduced to -1, 4D6 reduced to 2, etc.).

GAS EFFECTS

Type	Effect	Damage
Nausea	Illness	-4 REF
Teargas	Tearing†	-2 REF
Sleep Drugs	Sleep†	None
Biotoxin I	Death	4D6
Biototoxin II	Death	8D6
Nerve Gas	Death	8D10

†Half effect is drowsiness, -2 to all stats.

Flamethrowers

Flamethrowers are much like other area effect weapons, with one difference; they can be "swept" between two points. When using flamethrowing weapons, you may decide both a starting point and an ending point; then roll to Hit, determining if you're on target. Missed rolls refer to the Grenade scatter chart (pg.99). Anything caught in the sweep between the two points is ignited. Using these weapons in anything other than

the cyberweapon form requires the *Heavy Weapons Skill*; cyberweapon flamers use *Handgun Skill* as the default. Damage is 2D10 the 1st turn, 1D10 and 1D6 the following two turns. Hard armors protect normally. Soft armors must be >15SP to protect the target, and are damaged 2pts/hit.

Mines

Mines come in two types; standard land mines and "claymore" antipersonnel mines. A **land mine** is designed to stop vehicles or other heavy objects; it is easily detected with most magnetic sensors (7 in 10 chance). You step on it and it blows up. Simple. Damage is 4D10.

A **claymore** is designed to stop *people*, not vehicles. Claymores can be triggered by tripwires, time delays, or remote switches. Claymore mines have an hourglass shaped area of effect, rather than a circular one (see illustration). The dimensions of the "front" cone of destruction are 6m wide by 75m long; the dimensions of the "rear" cone of destruction are 6m wide by 6m long. At the juncture of the two cones is a 6 meter wide circle. Damage is 4D10.

Rocket Powered Grenades

Rocket Powered Grenades (RPGs) are a hybrid of grenade and rocket projectile, with far greater range and accuracy. They are also easier to acquire than missiles. With the exception of the disposable Armbrust RPG, most have the disadvantage of backblast, making them impossible to fire in a confined space. RPGs are fired as with other grenade launchers or shoulder arms, using the character's *Heavy Weapons Skill*. Damage is 6D10.

Missiles

Missiles and Rockets include radar and optically guided missiles, mini-rockets and shoulder rocket launchers. Using missiles

requires use of the *Heavy Weapons Skill*. When firing missiles and rockets, treat them as rifle-fired grenades with longer ranges and larger areas of effect. Damage varies.

Note for Rockets and Missiles: If a rocket or missile has an Armor-Piercing warhead, the armor's SP is halved, but the damage that penetrates is not.

Explosives

Explosives vary from grenades in that the more you use, the bigger the blast area. Explosive amounts are defined as units; one unit of TNT would equal one stick; one unit of plastique would be an ounce, etc.

EXPLOSIVE RANGES

Explosive	Unit	Area	Damage
Plastique	1kg	4m	7D10
C6	1kg	5m	8D10
TNT	1stick	3m	4D10

Take the area covered by one unit of explosive and multiply this by the total number of units. Damage is applied to the overall body, rather than to a location.

Example: Ripperjack lumps four sticks of TNT together and tosses them into an abandoned building 10 meters away. One stick has a blast area of 3 meters—4x3=12 meters. Ripperjack is caught in his own explosion and takes big damage. Bad move, 'Jack.

Molotov Cocktails

Molotov cocktails are the favorite of would-be terrorists and people with a lot of gasoline, rags and empty bottles around. A molotov covers 2 meters for every liter of fuel used (a standard soft drink bottle would cover 2 meters). Damage (2D10) is applied to the overall body, rather than to a location.

Melee Attacks

Melee attacks include **clubs, knives, swords, axes, chainsaws, sledgehammers, monokatanas and monoknives, monomolecular chains, cyberbeasts, battlegloves, rippers, scratchers, martial arts weapons, hand to hand attacks and brawling.**

Melee attacks differ from ranged attacks in that you are opposing a person, instead of a

target. To make a melee attack, the formula is:

$$\text{ATTACKER REF} + \text{SKILL} + 1\text{D}10 \\ \text{VS} \\ \text{DEFENDER'S REF} + \text{SKILL}^* + 1\text{D}10$$

*Martial arts, Fencing, Melee, Dodge or Athletics can be used, depending on situation and Referee decision.

Martial Arts & Brawling

Brawling and **Martial Arts** attacks are different from other melee attacks in that an attack can be made in a number of ways. You could, as an attack, use:

- **Strike:** Cause 1D6/2+ Damage Modifier.
- **Kick:** Cause 1D6+Damage Modifier.
- **Block/Parry:** Stop or absorb damage.
- **Dodge:** -2 to Attacker's hit roll.
- **Disarm:** On successful roll, knock or remove weapon from opponent's hand.
- **Throw:** Requires a Grapple first. Opponent is knocked to ground, taking 1D6+Damage Modifier, plus making a stun roll at -2.
- **Hold:** A painful joint or body hold. You must Grapple your opponent first. Foe is immobilized until an escape is made.
- **Escape:** On successful roll, you are free of the hold and may move.
- **Choke:** Requires hold or grapple as the previous move. Opponent takes 1D6 damage per turn.
- **Sweep/Trip:** Knock opponent to ground. He is -2 to next his attack; you gain +2 to your next attack.
- **Grapple:** A grabbing or holding move, prerequisite to applying a throw, choke or hold as the next action.

Martial Arts: Martial Arts are traditional forms of melee combat that have been developed to be deadlier than regular brawling. All martial arts techniques have **key attacks**—attacks which reflect the particular strengths of the technique. When a key attack is used, such as a karate kick, the character gains an +2 to +4 attack bonus (depending on the style of martial art).

For example, *Karate* would have the following moves:

"I didn't have time to draw my gun. But I did have time to snap a wheel kick into his face, followed by a spinning crescent off the back heel. That took him down long enough for me to get the Minami out of my armor-jacket.

"Good thing too— his partner was right on me with a backfist and a hand-strike combo. All of it pure chipped skills. Too bad for her— a 10mm slug at hyper-velocity beats kung-fu any day..."
—Morgan Blackhand

Strike	+2
Block/Parry	+2
Kick	+2

A *Karate* Master would be able to do any other type of move, but would be better at these three.

A Master of *Choi Li Fut* would have:

Strike	+2
Block/Parry	+2
Kick	+2
Throw	+1
Dodge	+1

—making him far more versatile than our *Karate* Master.

Of course, it would far more difficult to learn *Choi Li Fut* than *Karate*; this is reflected in the **difficulty level** of the form. The number of Improvement points normally required to increase your level of skill is multiplied by the difficulty level to show this. A full list of martial arts, difficulty levels and key attacks is on pg. 100.

Damage: In addition, martial arts are far more deadly than regular brawling. When using martial arts, you will gain a damage bonus equal to your current level of martial arts in addition to any strength bonuses.

Dodging

Defenders can try to **dodge** melee attacks by announcing their intention to dodge at the start of the turn. This will impose a -2 attack penalty to any attacks made against them in that turn; however, any other actions the defender makes will have a corresponding -3 penalty for each successive action.

**DODGE=-2 TO ATTACKER
ROLL, -3 TO DEFENDER'S
OTHER ACTIONS**

Parrying

Defenders may also elect to **parry** melee attacks by announcing their intention to parry at the start of the turn. Any attacks made during the turn must expend their damage against the parrying object first.

Swords and other bladed weapons can be used to parry *without* taking damage, but

must make a save (9 or lower on 1D10 for normal weapons) to avoid breaking. Any other actions the defender makes will have a corresponding -3 penalty for each successive action.

**PARRY= STOPS THE ATTACK AT
-3 TO DEFENDER'S OTHER
ACTIONS**

Melee Damage

When making melee attacks with weapons, the damage is listed as part of the weapons description.

When making a melee attack, you must also add a damage modifier based on your character's body type to any damage. This damage modifier is listed in the **Damage Modifier Table** below.

DAMAGE MODIFIERS

Strength	Add to Damage
Very Weak	-2
Weak	-1
Average	+0
Strong	+1
Very Strong	+2
Body Type 11-12	+4
Body Type 13-14	+6
Body Type 15+	+8

Monoknives, Monokatanas and Slice & Dice

Monoknives, monokatanas and Slice & Dices do double damage on a natural attack roll of 10. These weapons will always break on a fumble (a natural 1), and require a special roll to determine if they shatter when used to parry (4 or less on 1D10). Unless otherwise noted in the weapon's description, all mono-edge weapons are at 1/3xSP vs. soft armors, 2/3xSP vs. hard armors.

Cyberbeasts

"Cyberbeast" is the popular term used to describe any cybernetically controlled weapon that is stored in the body and yet has the capacity to attack on its own. Cyberbeasts may make one attack per turn. They have a **total attack skill of 10+1D10**; in all other aspects, they attack as characters would. The most common type of cyberbeast is the **cybersnake**, which cause 1D6 in damage per attack.

Vehicles In FNFF

Vehicles involve two elements. The first is control of the vehicle; the second is attacks and damage. Although a more realistic system is included in *Solo of Fortune*, this simple system will work for most cases.

a) Making a Control Roll: To control a vehicle you must roll a combination of your

**REF+DRIVING/PILOTING
SKILL+1D10+ MODIFIERS**

equal to or greater than a specific control number. The control number is determined by the difficulty of the maneuver you want to perform.

Simple (swerve, take off or land, hover, rotate)..... 15

Difficult (tight turn, control a skid, recover from a stall, emergency stop, pull out of dive, reverse or pull away) 20

Very Difficult (bootlegger turn, regain control from spin) 25

b) When making your roll: you must add any and all modifiers that apply to the situation to your final Control Roll. There are modifiers for both vehicles and speed of travel:

CONTROL MODIFIERS

Standard car	-0
Limousine	-3
Sportscar	+2
AV-4	-2
AV-6	+2
AV-7	+1
Motorcycle	+1
Truck	-4
Rotorcraft	-0
Osprey	-0
Boat	-1
Double safe speed	-2
Triple safe speed	-4
Four times safe speed	-6

On a failed roll, roll 1D6 and consult the **Control Loss Table** below:

CONTROL LOSS TABLE

Roll	Result
1-2	Skid or slew; no other result.
3-4	Major skid; slide 1D10x10 feet sideways in direction of travel. Aircraft stalls, losing 1D10x50 feet of altitude.
5-6	Roll ground vehicle after sliding 1D10x10 feet sideways in direction of travel; take 5D6 damage. Aircraft goes into spin, lose 1D10x100 feet of altitude.

Vehicle Combat

Vehicle combat is performed exactly as with other combat, applying all appropriate modifiers, and using the Weapon Skills appropriate for the type of weapon. Shots are not targeted and there are no location for damage. Vehicles are usually armed with lasers, missiles, machine guns and railguns, and may receive bonuses for turret mounted weapons.

Vehicle Damage

Vehicles have both SP values and **Structural Damage Points (SDP)**. If armored, the vehicle's SP is subtracted from the damage taken, with the remaining damage subtracted from the vehicle's SDP.

When a vehicle is reduced to 0 SDP, it is considered to be destroyed or inoperable. In this simplified system, there are no locations for damage—all points are subtracted directly from the vehicle's SDP.

Crashing & Ramming

Crash and ram damage is determined by dividing the speed of the moving vehicle by 20 (round down), to determine the number of six-sided dice thrown. This value is multiplied by a modifier based on the mass of the object collided with, listed in the **Weight Modifier Table** below. The vehicle takes this many dice in damage to its SDP, while all occupants take one-half of this die amount.

WEIGHT MODIFIER TABLE

Size	Multiplier
Very Light (small box, feathers) .	x.5
Light (man, large box)	x1
Medium (motorcycle)	x2
Heavy (car)	x3
Very Heavy (truck, ground)	x4

NETRUNNING

Face it; you don't need to know a lot about the medical technology of the 21st Century. You need to know what to do when you're bleeding to death in a dark alley somewhere.

SECTION **8** TRAUMA TEAM

So let's look at the most important question first—is this guy going to survive or should we call Savage Doc's and arrange for a body pickup?

Death

Whenever a character's Wound State drops to MORTAL, he has a pretty good chance of dying. But when? In *Cyberpunk*, each time you are at a MORTAL wound state, you must make a Death Save to avoid dying. To make the Save, roll a 1D10 value lower than your character's Body Type, subtracting the level of Mortality from your base chance to save. Each turn, you must make another death save to see if the character makes it through another turn. On a successful roll, you make it; on a failed roll, you will die at the end of the turn in which the roll was made.

For example, say Savage has a Body Type of 10 (Very Strong) and takes a Mortal 4 wound. He must roll lower than $(10-4)=6$ to stay alive. The first turn he rolls a 5. Whew. The next turn, he rolls a 7 and expires. Immediately, his mates start fighting over who gets his boots.

Get the point? Sooner or later, you'll fail a roll and die. The only way out is **stabilization**.

Stabilization means the patient is no longer losing blood and that his major damage has been contained through use of drugs, battlefield surgery, and/or wound dressing. A stabilized character will no longer be required to make Death saves each turn. Anyone (except the patient himself) can attempt to stabilize a mortally wounded character; it just works better if the physician has had some medical training. A lot better.

VERY IMPORTANT

A Trauma Team will always arrive within 1D6+1 minutes of your call.

HEALING RATES

Treatment	Pts./day
First Aid	0.5
Medical Tech	1
Med Tech+Speed Heal	2
Med Tech+Nanotech	2
Med Tech+Nano +Spd. Heal	3

A successful stabilization is made by rolling a total of your TECH stat, any Medical Skill and one D10 for a result equal to or higher than the total number of damage points the patient has taken. *For example, Savage has taken 20 points of damage, placing him in a Mortal 1 Wound State. To stabilize him will require a roll of 20 or greater.* Once stabilized, the character is no longer in danger of dying unless another wound is taken. At that point, the whole messy business begins again...

The chances of a successful stabilization roll can be increased by the following modifiers, added to your die roll.

Advantage	Add to die roll
Full Hospital & Surgery	+5
Trauma Team Ambulance	+3
Cryo Tank	+3

Death State

But let's say *your* ripperdoc had a Medical Tech Skill of 2...

We can do some pretty amazing things these days. We can grow skin, blood, organs, limbs and muscle tissue in collagen-saccharide tissue tanks. Other parts, like toes, fingers, eyes and internal organs can also be purchased from the local Body Bank and grafted on with advanced microsurgery. What we can't do is regrow souls. Once you're dead, you're dead.

Let's amend that: once you're DEAD 10, you're dead. Because twenty-first century medicine is so good at reviving the clinically dead, TraumaTeam™ Inc. (the world's largest paramedical service, with offices worldwide), has established ten levels of death, each succeeding level a measure of how difficult it will be to revive the patient. This measuring system is called Death State. For every minute (six turns) that you are clinically dead, your death state increases by two levels. *Example: I am killed at 9:00. Three minutes pass before the Trauma Team™ AV-4 arrives. I am now at Death State 6.*

This is of critical importance to the dead Cyberpunk character. When the Trauma Team arrives, a roll must be made to deter-

mine if the patient can be revived. This roll, on 1D10, must be higher than the current Death State number, or the patient is a candidate for the Body Bank. On a successful roll, the patient is stabilized at his last Wound State and the process of healing can begin.

Healing

Okay, so you're not on a slab in Savage Doc's place...

In order to recover from damage, characters must make some type of medical skill check. Otherwise, the patient continues to take damage (from infection and system shock) at the rate of 2 points per day. If the patient is at a Mortal Wound State, he must make a daily Death Save as well as taking this damage. Without medical aid, you're going to run out of luck pretty soon. This is probably why humans invented medicine in the first place.

To make a successful medical skill check, you must roll a value (using TECH, your medical Skill and 1D10) greater than the total number of points of damage the patient has taken. Medical skill checks are made with two skills, *First Aid* or *Medical Tech*.

First Aid

First Aid involves cleaning and dressing the wounds, administering medication, setting broken limbs and putting on splints. When a character makes a successful First Aid skill check, the patient will recover at the rate of 0.5 points per day. *Example: A Light wound would be healed in 8 days. A Critical wound would heal in 24 days, a Mortal 3 wound in 56 days.* Only one check need be made. You may (within reason and at Referee's discretion), perform first aid on yourself. On an unsuccessful roll, the patient regains no points. New attempts may be made once per day until a successful roll is made.

Medical Tech

Medical Tech skill assumes that the character has studied medicine in a professional setting. This gives him the ability to perform surgery, prescribe drugs, and know the proper treatment of injuries. He can

replace damaged organs with vatgrown pieces, graft on new limbs, or install cyberlimbs. You cannot perform Medical Tech skills on yourself.

A character with *Medical Tech* skills makes a check as if using the *First Aid* skill, however, with *Medical Tech*, the patient will recover at the rate of 1 point per day. For example, a light wound would be healed in 4 days. A Mortal 3 wound would heal in 28 days. Using Medical Tech skills supersedes the use of First Aid skills; a patient on which both have been successfully performed regains points at the rate of 1 per day, not 1.5! As with First Aid, the patient regains no points until a successful roll has been made. However, second attempts may be made once per day until a successful roll is made.

Speed Healing Drugs

Drugs can be used to speed the healing rate by 1 additional point per day. Expensive and often proscribed, these drugs have a neural side effect of reducing the patient's REF stat by 1D6/3 for a week after use. *Speedheal* costs 1650eb per treatment.

Nanotechnology and Tailored Antibodies

Nanotechnology involves the use of incredibly tiny, psuedo-organic machines to perform minute surgical tasks. These tiny tools can be programmed to repair damaged cells with molecule-sized polymer threads, or to act as temporary bridges between mutilated nerve endings.

Combined with tailored antibodies, nanotech devices can speed healing to twice the normal rate (patients recover 1 point per day in addition to normal healing). A Light Wound for example, would be healed in two days, while a Mortal Wound 0 would completely heal in eight days. When combined with speed healing drugs, this rate is increased to 3 points per day, allowing the same mortally wounded character to be back in action in an unbelievable six days!

Here's the catch. Besides being expensive (1500 eb. per treatment) nanotech is avail-

able only in certain hospitals (1 in 10). But if you've got the money, it's the best option for getting back on the Street fast.

Being Patient

The first thing to remember is that after a *First Aid* or *Medical Tech* roll is made, the patient *still* has to actually recover (this isn't a fantasy game where a magician can lay on hands and the gutshot victim springs up ready to tackle the next challenge). Each Wound State imposes certain limits on the character:

Light Wound: The patient is fully ambulatory; he can go about his business with a minor amount of pain.

Serious Wound: The patient is ambulatory, but will need his dressings changed once a day, and will be at -2 REF for all actions.

Critical Wound: The patient must spend at least half of his day in bed in order to regain any lost points of damage. Other activities must be limited at simple tasks, at a -4 REF to all actions. Dressings must be changed twice a day, and nursing care of some sort must be available.

Mortal Wound: The patient is bedridden. At Mortal Wounds 3 and above, he is probably comatose (50%) most of the time, and wired into all kinds of machinery for life support. He requires constant care during the entire process, although he will not have to make Death Saves (he's been stabilized).

A Sample Medical History

Ripperjack takes a gunshot wound (25 points total) to the gut, reducing him to Mortal 3. His partner has a high *First Aid* skill and makes a *Stabilization* roll to save him. So far, so good.

As soon as Ripperjack is stabilized, his partner calls in the Trauma Team™. Four minutes later, the AV-4 touches down. The Trauma Team™ Medic makes a *Medical Tech* check on Ripperjack. The roll is successful. The Team takes 'Jack to Night City General Hospital and checks him into Emergency.

"You got a slice in the belly—that's a Light Wound. You got a ten-inch wedge taken out—that's a Serious Wound. You got your guts spillin' out in Techniholo all over the pavement—that's a Critical Wound.

"Anything worse than that, you're just Spare Parts waitin' for a Trauma Team pickup..."

—Ripperjack

**TRAUMA
TEAM AV-4**
USED FOR RESCUE,
MEDICAL
EMERGENCIES.

As a Mortal 3 patient, it will take Ripperjack 13 days to recover enough to reach a Critical Wound state. During this time, he will be in a hospital bed, wired to life support, and out of it on drugs (when he reaches Mortal 2, the doctors can take him off the drugs and life support). At Critical, Ripperjack is able to hobble around the ward for a couple hours at a stretch, while the nurses look after him. In 4 more days, he's able to leave the hospital as long as he gets his dressings changed once a day. In 4 more days, he's nearly up to full function. It's taken him 21 days to get back on the Street. Now he can start earning enough money to pay off his medical bills.

Elective Surgery

Not all medical care is the result of accidents or combat. This is the Metal Age, and when you want to get cybered up, you gotta pay a price in blood.

If you're going to get wired with a cyberlimb, the first thing you'll have to decide is whether you want to keep the meat one. For 100eb a month, a Body Bank will store your old one until you decide to reclaim it, with only a 20% chance that someone will sell it for spare parts in the meantime. For

200eb a month, this drops to a 5% chance; not perfect, but better than nothing.

Now you've ditched the old meat in the freezer, it's time to get cybered up. A Medical Tech skill is required to install cyberwear. You can't install cyberwear on yourself. Each type of cyberwear has a **Surgery Code** (pg. 75). This code represents the minimum level of medical care required to install the cyberwear, the length of surgical time required, the cost of the surgery, the damage taken in surgery and the Difficulty of the installation procedure. The Surgery Code assumes that a successful *Medical Tech* check has been made on the patient as part of the operation. Healing is then based on the number of points lost due to the surgery.

Negligible

Required: Mall clinic or other drop-in bodyshop.

Surgical Time: 1 hr.

Surgical Damage: 1 point

Surgical costs: Included with installation.

DIFF= Easy (10)

Minor.

Required: Medical center or ripperdoc clinic.

Surgical Time: 2hrs.

Surgical Damage: 1D6+1
Surgical costs: 500eb
DIFF=Simple (15)

MAJOR.

Required: Full hospital with surgery center.
Surgical Time: 4 hrs.
Surgical Damage: 2D6+1
Surgical costs: 1,500eb
DIFF= Trained (20)

CRITICAL.

Required: Full hospital with surgery center.
Surgical Time: 6 hrs.
Surgical Damage: 3D6+1
Surgical costs: 2,500eb
DIFF= Difficult (25)

Example: Morgan Blackshadow decides to get a cyberarm installed.

The surgery code is Critical (CR). Morgan takes 11 points in surgical damage (Wound State=Critical). The surgery is Difficult (25), requires a hospital, takes six hours and costs 2,500 eb. It will take Morgan 11 days to recover fully, but he can be back on the street in a week (operating at a Light Wound State).

Replacement Surgery

Remember; arms and legs don't grow back. Even if you heal, a missing limb will still be missing. You can chose to replace it with something out of a Body Bank or vat, or you can go for the metal. Replacing a limb with either requires a CR surgery code. A replacement meat arm will cost about 1,000 eb. A replacement cyberarm starts at 2,000eb and goes up from there depending on what you want to plug into it.

Trauma Team Inc.

One of the most powerful Corporations of the Cyber Age is the Trauma Team™; a bonded and licensed paramedical franchise operating throughout the U.S., Canada and

parts of Europe. These crack ambulance units are specifically designed to get to the scene of a fatality within seven minutes (or your money back).

Trauma Team's crews are made up of the best paramedical techs and staff available. The teams are usually made up of a driver, a senior Medtechie, an assistant and two security officers. They normally travel in a heavily armored AV-4 aircraft, supported by mobile tanker trucks and ground refuelling stations. A Trauma Team AV-4 contains the most sophisticated revivification and life support technology available, including a mobile cryotank to lower the body temperature to approximately 24 degrees F, (the optimum temperature to prevent hemorrhaging, shock, and brain swelling).

A Trauma Team pilot is skilled enough to set a six-ton AV-4 on top of a parked car if need be... Meanwhile, the security team secures the area using the AV's twin autocannon, while the medtech gets the body on board...

Trauma Teams™ can be summoned by dialing 911 on any phone, and are equipped to trace the origin of any phone call to its source. (You're billed from the moment you call, until delivery to the Hospital.) You may also opt to carry a deadman transmitter, which will activate and automatically signal a Trauma Team the moment your brainwave pattern falls into a coma state. The most common

transmitter is in the form of a plastic credit card, which is activated by bending the card in half, and has a range of 20 miles. Trauma cards can be transferred between members of a group as long as the card's owner is present to sign the charges off when the Team arrives.

There are usually a dozen or more Trauma Teams on call at any time in a major city. Immediately after receiving an alert, the nearest Trauma Team™ unit goes airborne, their sophisticated tracking equipment homing in on the last known location of the patient. The pilot (who is skilled enough to set his six-ton AV-4 on top of a parked car if need be), drops in as close as possible. If the firefight is still going on, the security team secures the area (using the AV's twin autocannon or their own portable weap-

"I've been in Trauma Team for five years now. I've put my bus down on more rooftops than I care to remember, and I've been in more firefights than I ever was during the Wars. By now, I don't even see the bodies as people. I see them as either parts or pickups."

—Unknown

ons). The medtechs load the patient on board, shunting his life support to the on-board heart-lung machines, plugging him into onboard biomonitors, and chilling his body down in the refrigerated tank for stabilization. Rapid surgery is performed on the spot for the most critical wounds, while the med specialist uses a combination of electroshock, drugs and manual resuscitation to get the patient on-line again. The pilot slams down the throttles and the AV-4 rockets skywards on a pillar of exhaust, headed for the nearest emergency room. The entire process may have taken all of four minutes from start to finish.

As a privately owned concern, Trauma Teams™ are not under any obligation to transport a casualty to a hospital, although they are responsible for reviving and stabilizing critically wounded patients. Trauma Team fees are exceedingly steep (\$100 per minute), the best method of offsetting their exorbitant costs is to either carry Trauma Team services as part of a Corporate group insurance policy, or to establish an account with TT International, paying a premium of \$500 in advance each month for continued service.

Spare Parts

These are places where you can get the raw materials for putting people back together again. They are a staple of the Cyberpunk landscape, and a good source of steady income for the enterprising street dweller.

Body Banks

Just in case it didn't work out, you can still make a dead comrade pull his weight. The Lifeline Act of 1994 (an extension of the donor cards of the 1980s) allows a potential source of spare parts to carry a donor card in his wallet. This card must be registered with the federal government. Only donor carded bodies can be turned into a donor center, where a bounty is paid. The bounty is based on the parts involved and the body condition at the time.

Part	Average Bounty	Sale Price
Arm	500	1000
Leg	600	1200
Heart, Lung	700	1400
Liver, Kidney	200	400
Eyes, Ears	800	1000
Other Organs	200-300	400-600

Poor Condition: 1/2 normal bounty

Excellent condition: 2x normal bounty

The Government doesn't care who turns the body in. All you need is the card and a legitimate death certificate stating that the deceased died of natural or accidental causes, available through any local coroner. The result is that many firefights end with a frenzied looting of bodies for donor cards—followed by another firefight over disputed claims and ending in another frenzy of looting.

Legally, donor centers must be located in legitimate offices of the County or City Coroner's Office, or in a public hospital. However, a thriving black market in fraudulent donors thrives in most of the combat zones, usually out of "ripperdoc" clinics or Corporate centers (where high level execs get first pick of the new parts).

The biggest problem with Body Bank replacements is the availability of genetically matching parts. When attempting to locate a replacement limb or other part at a body bank, roll 1D10. On a 1,2, or 3, the part is unavailable that day. On a 4 or 5, the part is in, but it may be the wrong color or have some other minor difference.

Vat Grown Tissue Banks

This reflects recent (2017) improvements in genetic technology. Using tailored DNA and cell-growth vats, legs, arms, organs and other parts (including exotic designs like animal-human crosses) can be grown to order. Unlike bodybanking, vat-grown parts are available to match any genotype. However, the process is relatively new and is more expensive than simply using an arm off the rack (2 times the price for a similar body bank part in Excellent condition).

Bodysculpting

As long as you're having a few cybernetic grafts put on, why not go all the way and re-do the whole thing? The art of bodysculpting includes skin tints, hair and eye color changes, breast enlargement and reduction, and general all-over bodywork. You can have bone and muscle removed to become shorter, or have grafts added to become taller. Excess fat can be suctioned away, and collagen implants can smooth wrinkles, add weight, and change contours. Bodysculpting is readily available in

a number of body salons, including Bodyshoppe, Parts N' Programs, and Docs R Us™. Body sculpting includes appearance changes, appearance enhancement, and exotic fashion.

Change Appearance: Looking like a favorite movie star or celebrity is a popular fad in 2020; entire gangs, known as Posers, often have themselves bodyshaped to resemble famous people. Appearance changes are also a staple for Solos, Rockers, and any other sort of high mover who needs to change identities often. The cost of an appearance change is based on how convincing that change is.

At 1,200 eb, you look sort of like you wanted to; a casual observer could spot the difference on an AVERAGE Notice check.

At 2,400 eb, you look very much like you wanted; it would take a DIFFICULT Notice check to spot the sculpt job.

With 3,600 eb, you would look exactly as you wanted to look; spotting the sculpt would take a VERY DIFFICULT Notice check.

At the top end (5,000 eb), it would require a NEARLY IMPOSSIBLE check to spot the body-sculpt from your original face.

Increase Attractiveness: *Cyberpunk* style always goes to the extremes—you're either really ugly or very good-looking. One way to increase your Attractiveness is to have your body re-designed at the local 'sculpt clinic. The process is expensive, granted, but many people think having the right "look" for that year is worth a few thousand euro. Cost is 600eb per Attractiveness point gained. *For example, to raise my appearance four points would cost 2,400eb.*

Want to decrease your Attractiveness? A straight razor costs fifty-nine cents.

Exotic Fashion

Body-sculpt jobs that emphasize the alien or inhuman are known as **Exotics**. Vat-grown tails, furred skins, hooves, animal-like faces and ears, cats eyes and other semi human features are the highlights of this style. Exotic fashion is incredibly expensive, time consuming and usually a hobby

among only the very rich and very bored. Prices are based on the individual enhancements.

Facial Sculpts combine vat-grown parts such as muzzles, whiskers, animal-like ears, manes and cat eyes with the patient's normal features. There are entire booster-gangs based around various animal motifs of this type. Cost: 5,000eb

Tails are grown in vats, using gene bank tissue. They can be furred, tinted, scaled or bare skin. The tail is grafted to the base of the spine and linked to the nervous system by nanotech nerve threaders. Tails are relatively weak; they can pick up about a half pound. Cost: 3,000 eb.

Hooves, claws and paws can be grafted to replace normal feet and hands. They are not as dexterous as normal digits (-2 to REF), but are occasionally included as part of a Exotic body-sculpt. Cost: 8,000 eb.

Skin alteration uses transform DNA to change the structure of the patient's skin. Using tailored DNA, the skin can be induced to grow patterned fur, light scales, or exotic skin colors. The big drawback is a 1 in 10 chance that the graft will mutate and develop into skin cancer. You get to pick the number. Cost: 10,000eb.

"I want my legs lengthened and my hips angled. You can pull the stretch marks out of the tummy while you're at it. Don't forget to resize the breasts and widen my shoulders a tad...Now, about the tail..."

—Conversation at the local Bodyshoppe

Question:
*What's a
Cyberpunk
game with-
out drugs?*

Answer:
*A lot
healthier.*

SECTION

9 DRUGS

The drugs of the future are far more lethal than their 20th century counterparts. Many are experimental chemicals dumped on the Street by unscrupulous Corporations looking for guinea pigs. Some are home-brewed horrors designed in basement labs. Still others are military-designed combat drugs designed to create armies of zombie killing machines. All of them are bad news.

Most of the drugs in *Cyberpunk* are addictive—the people who designed them were looking for a way to create a captive market of addicts. Only the very wealthy can afford to have non-toxic "designer drugs" created for their own physiologies; most of the scum on the Street (the rest of you) are left sucking up the dregs of the chemical sewer.

Common street drugs include:

SynthCoke

Type: Stimulant Strength: +1
Difficulty: 20 Cost: 1000
Duration: 1D6+1 minutes

The second generation, synthetic replacement for cocaine. Like the original, its side effects are nasty: paranoia, psychological addiction.

Stim

Type: Stimulant Strength: +3
Difficulty: 10 Cost: 500

**Duration: 1D6+1 minutes**

Stim increases endurance, allowing the user to stay alert for longer periods. Side effects include mental delusions.

Syncomp 15

Type: Antidote Strength: +3
Difficulty: 13 Cost: 650
Duration: 1D6+1 turns

Syncomp is a broad spectrum poison antidote, used to treat nerve and biotoxins. REF is reduced at the rate of 1 point per dose.

Speedheal

Type: Healing Drug Strength: +2
Difficulty: 33 Cost: 1650

Duration: 1D6+1 hours

Speedheal (described on pg. 107), is designed to enhance the natural healing processes. Side effects are reduced REF by 1D6/3 for a period of 1 week after use.

Boost

Type: INT Booster **Strength:** +4

Difficulty: 12 **Cost:** 600

Duration: 1D6+1 hours

Boost increases INT by +1 for a 2-7 hour period. A Boost addict has gained full tolerance—his INT is no longer increased, and he must have more Boost within twelve hours or be reduced to screaming fits and hallucinations.

Blue Glass

Type: Hallucinogenic **Strength:** +1

Difficulty: 18 **Cost:** 900

Duration: 1D6+1 minutes

Blue Glass was originally developed as a biological weapon. Under stress, you will have a 3 in 10 chance of "flashing out"—reduced to staring blankly at the pretty colors in your mind (reduce INT by 1 per dose). Roll 1D10 and hope.

Smash

Type: Euphoric

Strength: +1

Difficulty: 2

Cost: 100 per 6 pk

Duration: 1D6+1 minutes

Smash is 2020's answer to alcohol—it's yellow, foamy, and comes in cans. It makes you loose, happy and ready to party. The downside is that when it wears off, its psychological addiction component makes you suicidal. If you fail your addiction Save, you sink into total catatonia; a feebly mumbling ball of pain—a ripe target for some Booster looking for spare change.

'Dorph

Type: Pain Negation **Strength:** +2

Difficulty: 5 **Cost:** 250

Duration: 1D6+1 turns

Designed as a combat drug and painkiller, endorphins reduce pain and stress effects. 'Dorph allows you to reduce the effects of stun or shock. Dorph also has a nasty cost in nervous system damage. Each time you use 'dorph, roll an additional 1D10. On a 1, you have lost 1 point of REF—permanently.

Black Lace

Type: Pain Negation **Strength:** +3

Difficulty: 13

Cost: 650

Duration: 1D6+1 hours

A high powered version of 'Dorph which imparts euphoria, adrenal rush, and invulnerability to pain. Your CL is raised by 2, and you are resistant to stun or shock effects. Lace is deadly. Lace users become fearless, cold-blooded killing machines—exactly what its military designers were looking for. If you fail your addiction save (1D10 roll higher than Body Type) roll an additional 1D6 and subtract the result from your EMP stat. Treat the result as if suffering from cyberpsychosis. If you go over the line, too bad. Roll up another character.

Remember: Drugs are dangerous. Mess with them and you'll probably kill your character. Or at least mess him up beyond repair. The choice is yours.

Just like real life.

Building Your Own

Although drugs are bad news, they are a prominent theme of the cyberpunk genre. It stands to reason that sooner or later, enterprising Referees (or players) may want to unleash their own biochemical horrors on the world. As any fan of *Miami Vice* (or a player who watches a lot of real life cop shows) can tell you, drugs

are a great way to get people fired up on the streets with lots of automatic weapons; in short, the perfect "McGuffin" for a mean, nasty, lowlife adventure.

The drugs given here are only examples; it's a good idea for Referees to build any new ones before introducing them into gameplay. Drug building requires a *Pharmaceuticals* Skill check against the DIFFICULTY of building the drug. To determine this value, you must first check the Effects Table below and choose what effects you want the drug to have. Add the total DIFFICULTY values together to arrive at a Base Difficulty for that drug.

Drugs are a great way to get people on the streets with lots of automatic weapons; the perfect "McGuffin" for a mean, nasty, lowlife adventure.

"He said, 'I've got over 1,500 units of Chlorametaphene coming in tonight with the Salazar Gang. I want it protected. You protect it, and I'll cut you in for 10% of the take.'

"So I said 'No.', shot him through the head, and turned the shipment data over to NCPD.

"My sister died of an OD, and I'm touchy about drug dealers..."

EFFECTS TABLE

DIFF	EFFECT
15	Increase REF by Strength of drug.
15	Increase INT by Strength of drug.
15	Increase CL by Strength of drug.
15	Enhanced Perception (+ Strength to Awareness checks).
15	Increase healing rate 1 point per point of Strength.
15	Antidote (+1 to Save per Strength)
10	Increased Endurance (+ Strength to Endurance checks).
10	Negate Pain Effects(+ Strength to Stun Saves).
5	Depressant (-Strength to Awareness).
5	Euphoric (makes you feel good)
10	Hallucinogenic (makes you see things).
10	Reduce Stun (+ Strength to Stun Saves).
5	Soporific (-Strength to Save vs. Sleep).
10	Aphrodisiac (-Strength to resist Seduction checks).
10	Contraceptive (male or female)
10	Antibiotic (+ Strength to Saves vs. disease).

Strength

Strength is the power level of the drug. The higher the Strength of the drug, the greater it's plus or minus effect on the body. Drugs come in strengths from 1 to 3. Add the Strength of the Drug to its Base Difficulty.

Side Effects

You can buy down the cost of a drug by buying **side effects**. These are bad things that balance out the beneficial side of the drug (for example, if cocaine wasn't psychologically addictive and didn't cause delusions, it would be everything Sigmund Freud thought it would be). You may never buy a drug's Difficulty costs below 2.

Psychological Addiction (-8pts): The character is psychologically addicted, and must roll lower than his CL each hour following the last dose of the drug. On a failed roll, he suffers extreme anxiety, fear and depression; he become driven to find more of the drug and can do nothing else. Kicking the addiction is a VERY DIFFICULT Endurance check, and may take as long as the Referee decides is sufficient.

Physiological Addiction (-10pts): The character is physiologically addicted, and must roll lower than his BT each hour following the last dose of the drug. On a failed roll, he will suffer intense pain and take 2D6 in damage until he can kick the habit (a VERY DIFFICULT Endurance check, taking as long as the Referee decides is sufficient).

Death (-15 pts): The drug has a fatal component that can kill the unwary. Each time the drug is taken, a Death Save must be made with a negative modifier equal to the drug's Strength number minus one.

Reduced REF (-5pts): The drug reduces REF at a rate of 1 point per dose for the duration of this dose. If a new dose is taken before the last has worn off, the REF penalty is cumulative.

Reduced INT (-5pts): The drug reduces INT at a rate of 1 point per dose for the duration of the dose. If a new dose is taken before the last has worn off, the INT penalty is cumulative.

Tremors (-2pts): The drug causes painful tremors in the hands, face (-2 to REF).

Hallucinations (-5pts): The drug causes hallucinations (colors, voices, strange shapes). The character is virtually unable to function normally. If you buy this as a side effect for a hallucinogen, the character will always have a really bad trip that is totally at the Referee's sadistic discretion. You Have Been Warned.

Paranoia (-3pts): The character is subject to paranoid delusions; he thinks "they" are after him, etc. (although in *Cyberpunk*, this may not all be delusion). The character must drop everything and devote his actions to defending himself against "them". Who "they" are is, of course, up to the Referee.

Delusions (-5pts): The character is subject to strong delusions; he thinks untrue things are real, that aliens are talking to him, etc. The character must drop everything and devote all actions towards the maintenance of his delusion. Which, again, is up to the Referee.

Sterility (-8pts): The drug causes permanent sterility on a 3 in 10 chance.

AIR HYPODERMIC

Also known as the "Bones McCoy", the airhypo is used to dispense drugs of various types.

Carcinogenic (-10pts): The drug causes cancer (3 in 10). If cancer is developed, the character will take 1 point of permanent damage unless a cure is effective (a VERY DIFFICULT Medical Tech check) or he dies.

Psychotic Rage (-10pts): The drug causes the character to fly into a psychotic rage, attacking anyone within range.

Aggressive Behavior (-12pts): The drug causes the character to become irritable and aggressive. On a 5 in 10 chance, he will pick a fight with the nearest person to him.

Irrational Fear (-12pts): The drug causes the character to become inordinately fearful of everything. He must drop everything and cower in near catatonia until the drug wears off.

Nerve Degeneration (-15pts): The drug

causes severe nerve damage (-2 REF lost permanently).

Duration

Drug durations vary from dose to dose, situation to situation. When a drug is taken, roll 1D6+1 to determine the total amount of time the drug will remain active in the system:

1D10+1 turns	x1
1D10+1 minutes	x2
1D10+1 hours	x3

Multiply the total DIFFICULTY (BASE + STRENGTH, minus SIDE EFFECTS) to determine the final Difficulty of creating the drug.

Cost

Per-dose cost is determined by multiplying the Difficulty level of the drug by 25 euro.

Example: Sindementaphilinine has a Difficulty of 26. Its street cost would be 650eb per dose.

NETRUNNING

SECTION

10

NETRUNNER

You patch in the last connection, making sure your wristplugs are tight. You slam down the "GO" switch. Instantly, your mind is filled with the grey white static of the drop to "on line." Then, with a sickening, falling sensation, your hurtle forwards into a maze of shifting neon shapes and spinning grid lines.

You're in the Net.

The Net is a vast telecommunications network that joins all of the computers and telephones on Earth. It is formed by radio, telephone, and cellular phone links, with microwave transmitters beaming information into orbit and beyond. In the late 20th century, the Net was only accessible via a computer terminal, using a device called a

modem to send and receive information. But in 2020, the Net can be entered directly, using your own brain, interface plugs, and complex interface programs that turn computer data into perceptual events.

Netrunners

Netrunners are outlaw computer jocks who are advanced versions of the computer hackers of the late 20th century. Netrunners operate on both sides of the complex and draconian laws covering computer-crime in the Cyberpunk world. Hard driving computer cowboys, Netrunners literally take their lives into their hands as they tackle the mighty data fortresses and the deadly counter-intrusion programs that guard them—the ultimate challenge of Man vs. Machine.

Some people do it for glory, or because it's there, but most run the Net for money. Inside each computer system linked to the

"Frack, she was good. She was the best. Maybe it was because she'd been a combat programmer during the Third Corp War, or maybe it was just a gift.

"I always figured it was because of the accident—the one that took off both legs and part of one arm. With all the cyberwear, there wasn't much left that was human. My guess was, she only came alive in the Net. Everything else was just marking time in a half alive body.

"Great lookin' half- alive body, though..."

—Edger

"There's over a dozen Netrunners out there that the Netwatch Cops would love to brain-burn. And Rache Bartmoss is at least two of them..."

—Spider Murphy

"Gawd, but it's great to be loved..."

—Rache Bartmoss

Net is information. Some of the information is trivial and useless, like recipe lists or notes, but much of the information is incredibly valuable. New business plans. Insider stock tips. Secret blueprints. Black-mail information. Hot new programs and software. Money you can transfer electronically to your own bank accounts. The formula for Coke Classic. Even if you can't use what you find, you can usually sell it to a Fixer who will in turn sell it to someone who can.

Another reason people run the Net is to back up other *Cyberpunk* teams. If you need to send someone into a heavily secured installation, the installation's computer may have maps of the entire place. Once inside, you can use that same computer to override security systems, open computer-controlled doors, even eavesdrop through computer controlled security cameras and observation devices. Most heavy duty Solo teams have at least one 'Runner on the payroll, just to gather intelligence about secure areas and obstacles to a battle plan. Corporations also hire Netrunners to protect their computer systems and to commit their own corporate computer espionage.

The laws of the 2000's are extremely draconian about computer crime. Most government agencies can freely use any and all means to eliminate intruders. Most Corporations are equally hardline (except with their own pet 'Runners). Even without resorting to highly illegal black programs, the law allows Corporate authorities to locate and arrest intruders on the spot. Heavy prison terms and possibly mindwipe are just samples of what awaits a computer felon.

But you're not planning on getting caught, right?

Net Geography

The Net is basically a vast "potential space" constructed by linking together phone lines and fiberoptic control cables. The Ihara-Grubb Transformation algorithms that govern Net reality generate this space as a "wire-skeleton" topography of grids and shapes. Areas of high line resistance (old lines, garbled transmissions), appear as "mountains", while areas of low line resistance appear as plains and valleys. Individual computer systems appear as ICONS or constructs created from millions of tiny "bits" of color and light, which, like video images or halftone photographs, can only be distinguished as individual parts by close examination. To simplify navigation

through Netspace, the actual communications lines of the Net are represented as an endless blue-white grid. When an individual line must be located, programs within the Netrunner's cyberdeck locate the required lines or access points, and identify them with a bright red beacon light.

The Ihara-Grubb Transformations are also designed to take the relative

position of a system into account in relation to its contiguous Netspace. For example, a computer system high in a skyscraper will appear as an icon far up in Netspace. A system buried underground will be positioned roughly as in relation to the plane of Netspace as it is relative to the ground level in external reality (or Realspace). Both systems can be found in a Netspace location analogous to their real locations in their individual subgrids. A moving system will travel through the subgrids that are parallel to its travel in Realspace.

Any place a computer can be turned on and hooked into the NET is an extension of the NET into this universe. The Net is, as far as anyone can tell, potentially infinite—if you can link a computer to this communications web, you will automatically create

"An Alien race could infiltrate the Net through space. Some cowboys think it's already happened..Me, I got doubts... But I also got a laser just in case"

—Edger

Kirama LPD -12 Cyberdeck

Speed: +3

Memory: 20MU

Cellular capable.

8,025 eb.

a new section of the Net around that computer. Thus, new areas are created all the time, as more computers are hooked up and logged onto the Net.

Theoretically, you could put a radio/Net link into a long range spaceprobe and extend the Net into deep space. But it would take a loooooong time to get to that area of Netspace, and it would take forever to do things. Ihara and Grubb theorized that an alien intelligence with a lot of power and a knowledge of Earth computer-tech could link to the Net over interstellar distances. Probably, it could not actually do anything; the best solution would be to beam a link to an orbital satellite, downloading a copy of the alien AI into the Net at this end, then move freely about the Net.

Some Netrunners claim this has happened already.

Islands of the Net

People, Places and Things in Netspace

Regions

Regions (also nicknamed "kingdoms"), are large areas on the world NETmap (such as *Atlantis* in the southern Atlantic/African Basin). They are referred to by **name**. A Region is a hazy zone of shifting boundaries; new regions pop up all the time, and the boundaries constantly change as potential Net reality shifts. It's not really a *place*; just a rough definition of an area where certain groups or governments have the most control. Regions include:

Atlantis: This is the second largest of the regional kingdoms, stretching from Central and South America to the west coast of Africa. The region is primarily controlled by the Central American Federation and its al-

"Boy, I wish ol' Bill Gibson was around to see this!"

"Hey, Edger. Don't you know it's unlucky to invoke the name of the Patron Saint?"

—Somewhere over the Pacifica Region, LDL 2542.0219

"Pacifica...Floating islands of light, capped with neon green fractal palm trees. The whole thing floats above a bright, glittering ocean, like something out of a tropic dream."

"They've got the virtual water construct set up so that you can see all the way down to a limitless seabottom, where glowing colory fishshapes dive between shifting mirage coral., pursued by clever dolphin programs, part AI and part illusion."

—Rache Bartmoss.
Net Traveller's
Guide, 2019

lied corporations. Key City Grids are located in Mexico City, Panama City, Bogota, Havana, Rio de Janeiro, Buenos Aires, Dakar and Acension. Atlantis is a fairly freewheeling region, with a lot of blackmarket trade, especially out of Panama City.

Rustbelt: This region covers the Central and Eastern United States. Key City Grids are the New York/BosWash Megaplex, Chicago-GreatLakes, Atlanta-CityCore, New Orleans, and St. Louis. The region is a near absolute dictatorship controlled by a troika of NetWatch (the worldwide Net security organization), the U.S. Provisional Government, and the EuroMarket Consortium. Systems are heavily monitored and computer crime treated with draconian ferocity.

Olympia: The Olympia Region spans most of the Southwestern and Western United States. Nominally, it is the domain of NetWatch and the United States Provisional Government. Individual city grids are usually controlled on a local level by the most prominent Corporation in the area; Denver (Orbital Air), Salt Lake (Militech), Dallas/Houston Megaplex (WorldSat), Albuquerque (Militech). Most of the traffic in these regions is corporate related, with many established bulletin boards and service networks.

Pacifica: This is the largest of the regions, covering the West Coast of North America and expanding over most of the Pacific Basin. As with Olympia, it is under the joint rulership of NetWatch and the USPG to the edge of the Hawaiian Basin; at this point, there is a four way division between NetWatch, USPG, Arasaka LTD and the Far Asian Co-Prosperity Federation. In the US, most key City Grids are controlled by the most powerful corps in the specific city; Night City (Arasaka), San Francisco (EBM), Los Angeles (Petrochem), Seattle (Arasaka). In these cities, control is relatively loose. Across the Pacific Basin, control increases as Arasaka tightens its grip.

TokyoChiba: This is a very small region covering the Japanese archipelago, specifically Tokyo, Osaka and Yokahama. Chiba is the center of operations for a number of very powerful zaibatsu, including Mitzubishi-Dai, Matsushima-Kiroshiu, and of course, Arasaka. However, due to the immense amount of inter-zaibatsu warfare, no one megacorp holds control, making this a ripe field for information brokering and corporate "netspionage".

Afrikan: This regional "kingdom" extends from the edge of Atlantis across Africa to the

Middle East and Madagascar. Key City Grids are Addis Ababa, Zanzibar, Cairo, Algiers, Nairobi, Mozambique and Alexandria. With the exception of Nairobi and Cairo (under firm Orbital Air control), the rest of Afrikan is a chaotic wasteland of antiquated systems, shifting alliances and fanatics. Caution is advised.

EuroTheatre: This most powerful of the regional "kingdoms", EuroTheatre is primarily controlled by the EuroCorps. Key City Grids are London, Paris, Berlin, Frankfurt, Munich, Zürich, Amsterdam, Rome, Madrid and Stockholm. The three largest EuroCorps in each city work in cooperation with NetWatch to maintain security. The EuroTheatre Net is dominated by corporate traffic; there are few private systems and most independent Netrunners are already known and recorded by NetWatch. EuroTheatre is a good place for legal business transactions, banking, Netconferencing and other legitimate transactions. It is a very, very bad place to commit computer crime.

SovSpace: This region covers the borders of the now reduced Union of Soviet Socialist Republics, extending into Eastern Europe. Key City Grids are Moscow, Leningrad, Warsaw, Kiev, Budapest, Vienna, and Prague. The USSR holds nominal control over this region, with control gradually shifting to NetWatch and the European Economic Community around Poland. Systems in SovSpace tend to be primitive, slow and equipped with a few deadly programs rather than sophisticated defenses. The Eastern European netrunners range from simple hackers all the way to the most daring cowboys in all Netspace (these guys have nothing to lose). The entire region is rife with espionage, information trading, and the petty bickerings of small political groups looking for their own economic advantages. A good place to sell information, if you don't mind being paid in low value currency.

Orbitsville: The largest potential region, covering the Low Earth and Near Earth Space. Orbitsville is a great place to meet people, pick up rumors and generally have a good of time. Security is loose to nonexistent. Orbitsville is primarily controlled by the Orbital Corporations and the ESA (which has its own version of NetWatch). There's not a lot of "groundhog" traffic—orbital time lag (2-3 seconds) makes Netrunning from Groundside a tough proposition. Local traffic is very busy, with every Spacer habitat and colony hooked up to a constant stream of chatter. Transactions are mostly on the small time level: trading raw materials, medicine, air, food, water and gossip.

Long Distance Links

Long Distance Links, (LDLs) allow instantaneous transfer between cities. The world wide Internet Communications Corporation maintains most of the available Long Distance Links as part of its long distance services, but many large corps have private Long Distance Links that go only between corporate offices.

Using a Long Distance Link requires a password (normally the Netrunner's Net Access code, which is used for billing purposes). However, with the right programs, one can convince a Internet that *this* call is a local one, or that the call was never actually made.

Wilderspace

Movement between Long Distance Links is almost always done via up/downlinks. Most of the physical space is "jumped" over, and is pretty much unknown territory. Yet, the activation of individual computers can create independent areas not directly linked to the Net. The intervening distances between physical points of the Net (such as San Francisco and Night City) are called *Wilderspace*. Wilderspace was originally theorized in 2004 by J.A. Grubb, a computer game designer and occasional hacker who conceived of it as a vast area of dormant, potential reality, which could come into existence when a computer was linked to the Net. Without up/downlinks, this region would be isolated from the main traffic of the Net, and accessible only by those who were willing to "walk" there the hard way.

Netrunner legend is that "something" probably lives in Wilderspace: rogue AIs, alien intellects, things which have their own separate "citygrids" that only appear occasionally when these forces open an up/downlink to the main Net. The equivalent would be a remote South Seas island which is unknown and unreachable, until a canoe is sent to the nearest civilization. If the natives were skilled at entering civilization and disguising their true nature, they could probably remain undiscovered for centuries.

NetWatch

NetWatch is a policing organization

designed to patrol the Net looking for illegal activity. Governments, individual corporations and other large groups contribute money, equipment and their best Netrunners to the NetWatch organization. The NetCops are equipped with very powerful software and move freely through the Net, patrolling a specific "beat" that may cover a city, Region or even a continent.

NetCops (Wolves, Weasels, The Icemen) are equipped with very powerful tracking programs, as well as "arrest" programs that can freeze a cyberdeck in a "loop" and hold the Netrunner frozen, unable to jack out until released. While arrest and imprisonment are the goal of the NetCops, they have been known to use black programs to kill or maim their opposition.

Bulletin Boards (BBS)

A BBS is a friendly Data Fortress where Runners can meet to exchange information, chat, swap software and so on. A BBS Data Fortress is usually heavily protected and hidden somewhere. A code word or very complex encryption is needed to get in. Once inside, the BBS user encounters a number of "areas" or "clubrooms" designated for various functions. These are usually designed around thematic virtual realities. For example, the *Hunt Club* BBS of Denver is an elaborate virtual reality construct of a grand old English manor house, complete with servants, a drawing room and a croquet green.

"NetWatch was created as part of a unilateral agreement in the UN treaty. It is empowered to protect and serve the law abiding citizens of the World Communications Network...."

**—The Netwatch Story
A DMS Production**

"NetWatch. A buncha hoods with cyberdecks who like to push people around. We like to lead the Icemen into deserted regions of Net Space and dry gulch 'em. And not just for the fun of it..."

—Rache Bartmoss

"My first deck was an ancient Hitachi-Radio Shack. It had this keyboard with a grey-screen monitor, and it was slower than a Congressman passing a tax bill. First thing, I used it to hack into the Zetatech sales office and write myself an order for a brand new Parraline 5750A. That deck had everything; speed, power, memory. I was in love..."

"But I still keep that old Hitachi-RS 95 around, just in case. You never know."

—Spider Murphy

NetGear

Interfaces

The human mind can't comprehend a stream of data any more than it can "see" an electron. It needs a way to interpret the incoming data as something meaningful. So Netrunners use an **interface program**—a super-advanced version of the more primitive "virtual reality" systems of the 1990's—to interpret for them. The interface intercepts data coming through the cyberdeck and translates it into something understandable—then routes the altered data to the Netrunner's eyes and ears. The world perceived through the interface is real, because it directly plugs into his senses.

So why go through all the trouble to create interfaces? Why not just use a keyboard like the rest of the meat minds? Partially for the fun of it. But in addition, a realistic and dangerous interface gives the Netrunner an extra edge. It keeps him alert, involved and interested in his environment. After all; what would you react faster to—the word *Demon* appearing in the air in front of you, or a living, breathing, five-ton monster cracking a flaming whip over your head?

You betcha.

The Second Generation

The early interfaces were an art form; millions of programming hours were devoted each year in constructing accurate and interesting realities for Netrunning, using sophisticated artificial intelligence programs and random story generators. These interface programs functioned on a low end, narrow focus bandwidth, which could not carry much more information than an old fashioned computer modem of the 1990's. In addition to being limited in scope, these early interface programs were also unable to give the Netrunner a sense of his position in the real world beyond the computer screen.

Then, in 2014, the wizards of the Net achieved a major breakthrough—the Ihara-Grubb Transformation Algorithms. The I-G Transformations allowed a cyberdeck to extrapolate the pathways of the Net in relation to their "Realspace" coordinates, then generate a graphic model that could

be perceived by an interface program. The results could be used as a navigational aid through the Net, as well as providing a sense of space and time not possible with earlier designs.

ICONS

One of the other benefits of the I-G Transformations are that they allow you to translate the signal of your cyberdeck into a visible representation in the Net. This representation of yourself is known as your **ICON**.

Most things in the Net have some kind of **ICON**; even if one isn't specified, the I-G formulas will create a polygonal form to represent them. Your **ICON** is your personal symbol; it's what other Netrunners will talk to and relate with when they encounter you in Netspace. Your **ICON** can look like anything you want it to: armored technowarrior, fantasy creature, bizarre shape or logo— even yourself. You can change your **ICON** any time you enter the Net. You can even disguise your **ICON** by using special programs for stealth and evasion. Choosing your **ICON** is one of the first things you'll decide when you jack in. Make sure it's got your personal style written all over it.

Interface Plugs

So what do you need to run the Net besides a cool brain and a hot interface? Plugging into the vast metaverse of the Net requires two additional and all important pieces of hardware.

The first is a set of neural or interface "plugs." Interface plugs are basically just that—plastic plugs built into the Netrunner's wrists, temples or back of neck, to be connected to a cybermodem by cables (as described in *Putting the Cyber Into the Punk*, pg.81-82).

You can get by without plugs; all you'll need is a set of **trodes** (pg. 134.). These are self sticking electrodes that pick up neural signals by skin inductance. They're slower and less responsive than plugs (-2 to REF while in the Net), but they are cheaper and don't have any humanity cost.

The other thing you'll need is a **cyberdeck**.

SGI Technologies "Elysla"

Speed: +3

CPU: 1

Memory: 20

Data Walls: +5

Options: Keyboard, 3x4m videoboard, eight 'trode ports, chip reader, fully portable.
4,260eb.

Zetatech Parraline 5750

Speed: +2

CPU: 1

Memory: 10

Data Walls: +4

Options: Keyboard, 2x3m videoboard, chip reader. About 3,600eb.

Cyberdecks

The standard cyberdeck is about the size of a paperback book, is made of plastic and weighs about a half-kilogram. It has six plug in ports for adding extra options, as well as six output ports for jacking in other people (the owner of the deck, however, is the only one who can control it, making the other people only passengers).

This is the stock deck everyone starts off their Netrunning career with. Prices range from 500.⁰⁰ for a used model, up to 1000.⁰⁰ new. This is where your Referee can show a little mercy, by turning your character on to a cheap used deck.

For a price, of course...

Most cyberdecks are table models—jacked in and blind, a Netrunner isn't going to be going much of anywhere, right? However, technological breakthroughs have taken

the deck off the table and put it on the Street:

Portable Decks: These decks have internal, rechargeable power packs good for up to 4 hours (recharge is 1 hour for every hour of battery power). All combat, cyberlimb and cellular decks are of this type. A portable deck costs 2000.⁰⁰

Cyberlimb Decks: These are portable decks about the size of a pack of cigarettes. They can be installed into a cyberlimb (phone connection cables are jacked between the limb and the phone lines). The deck itself is hardwired right into the body along with the controlling links for the cyberlimb. See *Putting the Cyber into the Punk*, pg. 90-91, for prices.

This can be a very dangerous option—hardwired right in, it's impossible for your

HITCHHIKERS

But wait! You can jack your experiences into a monitor so that others can watch, or even hook your buddies up with "trodes" to let them ride along. Remember; your Interface Skill is your ability to control and visualize—as in a fantasy run, others can see the mage do magic, they just can't do it themselves. With a trode hook, you can come along—you just can't run software or create stuff.

CELLULAR DECKS

These are very expensive decks which are implanted or otherwise kept on the body. As long as you stay in one place, you can instantly jack into the Net.

This is a good idea for parties, as it allows your Netrunner to move with the group. A special program in the 'deck runs all the Netrunner's body functions; it keeps him from falling over, drooling, or babbling; he can even use his voice while in the Net to describe things he sees. Because Netrunning actions happen at the speed of thought, this means that your Netrunner seems to go spacey for a few seconds, then says, "Hey," I found the electronic door and I'm running my *Doormaster Mark 5®* utility to open it." Then the door opens.

Unless you get into major Net functions, you need only pop in, run your LOCATE REMOTE utility, take control with your CONTROL REMOTE utility, do your thing and return. It's only when you're cracking systems that you have to stay in the 'face for a long time and bore the rest of the party.

buddies to notice you frying and yank the cables on you. Instead, you just burn.

Combat Assault Decks: These decks are constructed of rugged ceramics and steel, capable of taking bullet hits and crash impacts (SP20). Most combat decks are designed to be portable, and have adapter cables which allow them to be plugged into any type of phone line. Around 3000⁰⁰ when available (a DIFFICULT Task).

Cellular Decks: These are portable decks designed to link up with a cellular phone net. They are very effective anywhere within a city, but are useless in rural areas (most have jacks for manual phone patches). A cellular deck has a 25% chance of losing cellular connection when used in a moving vehicle; a failed roll will automatically drop the Netrunner out of the Net. But it's a small price to pay for the high level of mobility offered by a cellular deck. A cellular deck costs 4000⁰⁰.

Improving Your Deck

A standard deck has only one memory (holds 10 Memory Units (MU), or about ten programs), has a Speed of 0, and a data wall Strength of 2. While this isn't gonna mean much to you now, by the time you get to *Net Combat* (pg. 151) and *Designing Data Fortresses* (pg.154), you're going to want to know how to boost your deck as far as you can go.

Memory: For an additional 5,000eb, you can purchase an additional memory for your deck. This improves your program power to 20 MU, double its stock size.

Speed: For an additional 2,000eb, you can increase your deck's speed by one level, up to a ceiling of 5. This can be a lifesaver, as deck speed determines who moves first in a Netrunner combat. And in this game, last is dead.

Data Walls: For an additional 1,000eb, you can increase your deck's data wall protection by one level, up to a ceiling of 10. Data walls are important; they are the "armor" of the deck, resisting attacks from anti-system programs.

And then there are options...

Deck Options

In addition to your basic models, any type of deck can be enhanced by adding a few options.

Trode sets are self-sticking electrodes that allow you to run the Net without plugs. Trodes are slower than plugs (-2 to REF when in the Net), but have no humanity loss. They are commonly used by novice runners and by "tourists" visiting the Net on a lark.

Keyboards are an option which allow a Netrunner to control a deck indirectly. They are abysmally slow (-4 to REF), but are immune to all anti-personnel attacks except *Firestarter*.

Videoboards are flat screen, high definition TV monitors which can be used to show a Net's-eye view to outsiders.

Printers allow you to make hardcopy images and records from your deck. Most are small laser-printers about the size of a large book, using plain paper.

Chipreader/recorders use standard data chips (10eb each) to store programs, images and other useful things from your deck. They are about the size of a pack of cigarettes.

VoxBoxes are small speaker units that can synthesize sound from a deck. They can also be used by the Netrunner to talk to outsiders while he's in the Net. About the size of a pack of smokes.

Scanners are flat plastic plates with optical character reading and image recording capacity. They range from the size of a sheet of paper, all the way up to a meter on a side.

Option	Cost
Trode set	10 ⁰⁰
Keyboard	100 ⁰⁰
Videoboard	100 ⁰⁰ per sq. ft.
Printer	300 ⁰⁰
Chipreader	100 ⁰⁰
Extra Chips	10 ⁰⁰ ea
Vox Box	300 ⁰⁰
Scanner	100 ⁰⁰ -300 ⁰⁰
