

LANDMARKS
OF THE
LOST
ATLAS

The title is rendered in a highly decorative, calligraphic serif font. The word 'LANDMARKS' is at the top, followed by 'OF THE' in a smaller font. 'LOST' and 'ATLAS' are the largest words, stacked at the bottom. The text is embellished with various motifs: clouds above 'LANDMARKS', a landscape with trees and a small building between 'LANDMARKS' and 'OF THE', a large sunburst to the left of 'LOST', and a floral wreath to the right of 'LOST' and 'ATLAS'. The entire design is set against a dark green, textured background and is enclosed within a thin, double-lined gold border.

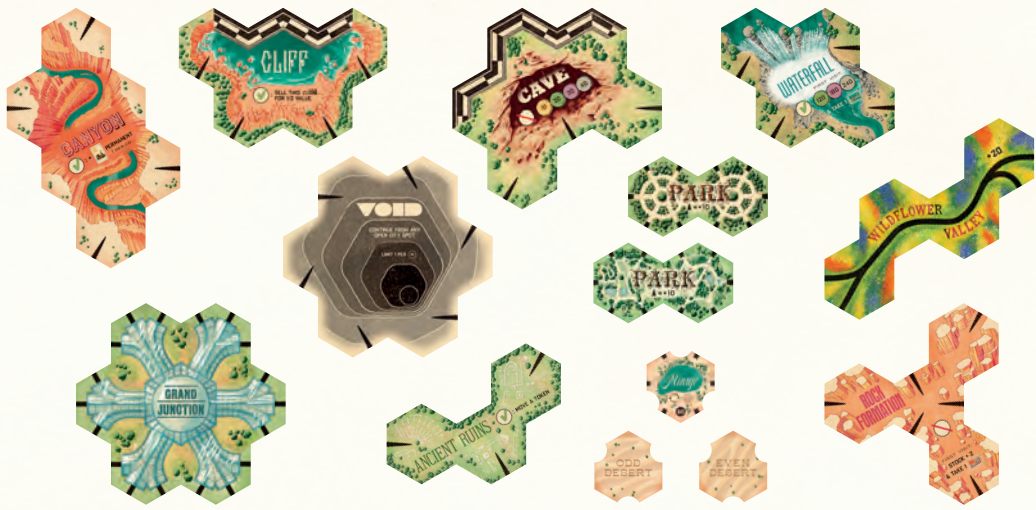

WELCOME TO LANDMARKS OF THE LOST ATLAS

Landmarks of the Lost Atlas introduces four new modules, as well as a few mini-modules and miscellaneous variants, to expand your Railways of the Lost Atlas games. These modules can be included individually or in any combination:

LANDMARKS	THE METROPOLITAN TRANSIT DEPARTMENT	EVENTS	NEW MINORS AND MAJORS
Landmarks add new strategies as well as more flavor to maps that include them.	The Metropolitan adds a neutral Corporation to the game that players can use to benefit their own interests and/or hinder others.	Events create temporary changes to the core rules of the game that players will need to adapt to.	New Minor Companies and Major Corporations add variety to the company abilities available in the game.
DIFFICULTY..... Decreased	DIFFICULTY..... Increased	DIFFICULTY..... Decreased	DIFFICULTY..... No Change
VARIANCE..... No Change	VARIANCE..... No Change	VARIANCE..... Increased	VARIANCE..... No Change

COMPONENTS

14 Landmark Tiles

11 Landmark Project Tiles

12 Waterfall Mini-Postcards

12 Rock Formation Mini-Postcards

16 Park Entrance Markers

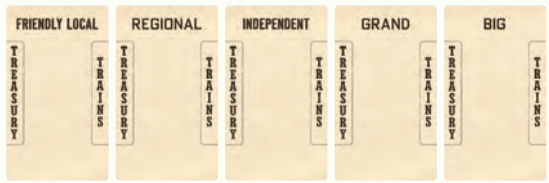

4 Ancient Ruins Blank Markers

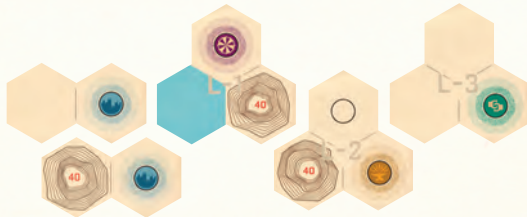

3 Train Cards
(for 6-7 Player Variant)

5 Direct-to-Major Partner Charters
each with 2 identity options

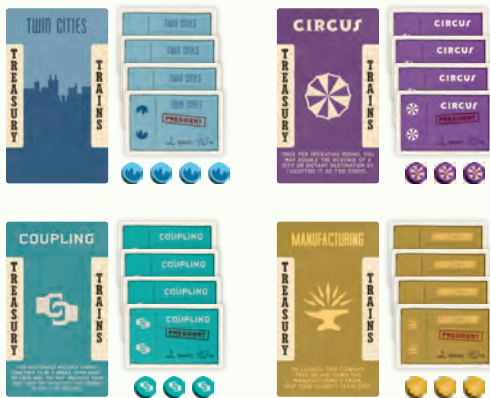

5 Minor Company Home Tiles

1 Minor Company Project Tile

4 Minor Companies with silkscreened tokens

4 Coupling Markers

1 Manufacturing Permanent 2-Train Card

2 Major Corporations, each with 2 identity options and silkscreened tokens

6 Additional Major Hubs

Extra 7/∞ Train (Combine with base game)

1 Metropolitan Board

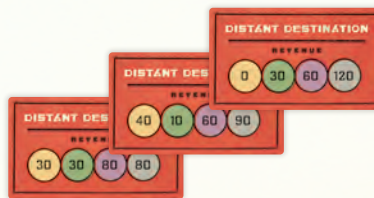

21 Metropolitan Certificates

12 Metropolitan Hubs

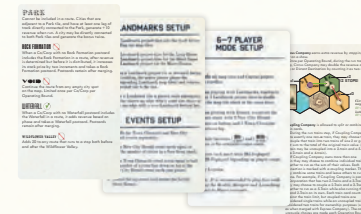

3 Distant Destination Revenue Cards (Combine with base game)

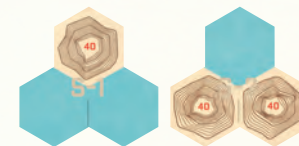

14 Event Cards

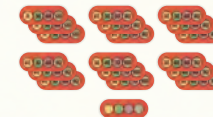

4 Player Aids (Double-sided)

2 Extra Map Tiles (Optional substitution with base game)

19 Distant Destination Tile Markers

LANDMARKS

SETUP

During the Map Building portion of Setup, add Landmark project tiles, selected at random according to the game mode chosen, into the stack before shuffling the map tiles.

Note: These are in addition to any other project tiles included in Setup.

- 3 Landmark project tiles for the Long Game
- 2 Landmark project tiles for the Short Game
- 1 Landmark project tile for Micro Games

When a Landmark project tile is revealed during Map Building, the active player places the corresponding Landmark map tile(s) following the normal restrictions and returns the project tile to the box. *Note: The Mirage and Parks map tiles need only two adjacent hex edges to be placed instead of the normal three adjacent hex edge restriction.* If the Landmark map tile(s) can't be placed, shuffle the corresponding project tile back into the remaining map tiles and continue Map Building with a new tile. After a Landmark tile is placed, each subsequent tile that shares an edge with it must also share at least one edge with a non-Landmark terrain hex (*blank, mountain, water, Distant Destination, or city*).

During gameplay, Landmark hexes are considered to be blank hexes for tile laying purposes (*i.e., track can run into the edge of the tile*). Track tiles cannot be placed over any Landmark hexes. If printed track terminates within the Landmark tile, a route may start or end at that tile but may not pass through it.

Counts as a stop.

Does not count as a stop.

ANCIENT RUINS

A Company or Corporation may include the Ancient Ruins in their route, though it provides no revenue. After revenue is determined, the Ancient Ruins allows the Company or Corporation that ran to it to relocate one hub token to a different available token location. They must be able to trace a route from the original location of the token to its destination location. The hub token does not need to have been used as a stop on the route that includes the Ancient Ruin in order to be relocated. If the token being relocated would leave behind a printed Company logo () on the tile, place a blank marker over it indicating that the token spot is no longer reserved.

CANYON

The Canyon has no effect prior to the first 4-train being purchased or exported. A Company or Corporation may include the Canyon in a route during their Operating Round, though it provides no revenue. After revenue is distributed, the Canyon allows the Company or Corporation that ran to it to acquire (*at no cost*) a 2-train that has rusted. This 2-train is permanent, can't be sold or traded in, can be discarded at any time, and does count against the train limit. A Company or Corporation that has owned a permanent 2-train from the Canyon may not acquire another. If two Companies that own permanent 2-trains from the Canyon merge, they may keep both.

Note: Landmarks that generate revenue are not considered cities, even if they count as a stop.

CAVE

The Cave generates additional revenue based on phase. The Cave does not count as a stop but must be included at the start or end of a route.

CLIFF

Once during a Company or Corporation's Operating Round, they may include the Cliff in their route(s). If they do, they may sell the train (*or one part of a  train*) that ran to the Cliff to the bank pool for half of its printed value. The sale occurs after determining routes and before distributing revenue. Resourceful Company cannot sell rusted trains. Money generated by the Cliff is placed into the treasury of the Company or Corporation.

GRAND JUNCTION

Each section of track on the Junction tile is independently connected to every other section of track on the Junction tile. Normal route rules apply (*i.e., you may not use the same section of track more than once in an Operating Round*). Multiple routes can pass through the Grand Junction in the same Operating Round turn, and a single train can even go through multiple times provided it follows all other route rules.

Mirage (+DESERTS)

Note: During Setup, when the Mirage project tile is revealed, all three single hex tiles are placed on the board individually by the player who revealed the project tile. Because the Mirage and Deserts swap places regularly, it may be helpful to place some extra blank hex tiles under each one to make them easier to remove from the map.

Once, during a Company or Corporation's Operating Round, the Mirage tile may be included in one route and counts as a 60 revenue stop. At the end of the run trains step, if the Mirage tile was run as a stop, it is swapped with either the Odd Desert or the Even Desert tile based on the train that ran to it. If the printed train (or sum of  trains) had an odd number, the Mirage swaps with the Odd Desert. If the printed train (or sum of  trains) had an even number, the Mirage swaps with the Even Desert. The ∞ train is considered to be even.

ROCK FORMATION

After revenue is determined, if the Rock Formation was included in the route, the Company or Corporation that ran to it increases their share price by two increments and takes a Rock Formation Postcard. This happens before revenue is distributed. One Rock Formation Postcard stays with Corporations after merging (return extras to the stack). Companies and Corporations with a Rock Formation Postcard may not include the Rock Formation in a route.

PARK

Parks add 10 to the revenue value of each adjacent city tile (other than Distant Destination) that has a section of track connected to it. This bonus is marked with a  (a city may have both a  and a  token). Trains cannot run into a Park. Multiple connections to the same Park do not add any additional revenue to the connected city tiles. A city tile value may be increased by both Park tiles if it has a direct connection to each.

The isolated stop on the Eastern Mining home tile cannot be directly connected to a Park tile. Each half of the Northern Port home tile requires its own connection to receive the value increase (this may lead to one half being more valuable than the other).

(See Diagram 1)

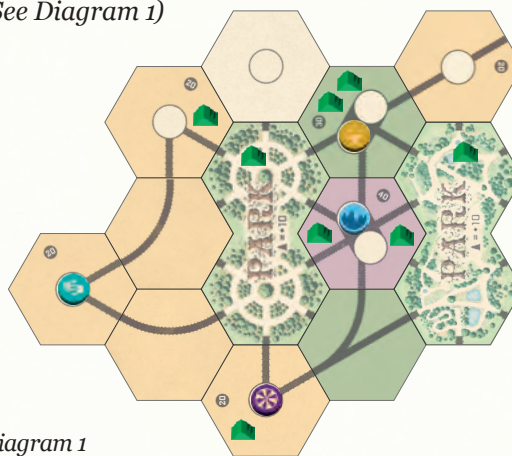

Diagram 1

The Manufacturing and Twin Cities home tiles each have two Park bonuses (+20) because they are adjacent to and directly connected to both Park tiles. The Circus home tile has one Park bonus (+10) because it is connected to both Park tiles but only adjacent to one (so only one direct connection is possible). The Coupling home tile does not have any Park bonuses because it is not adjacent to a Park tile.

VOID

Once per Operating Round a Company or Corporation may run a train into the Void and continue their route from any unblocked city spot on the map. All normal route rules apply. The Void cannot be used for track laying, hub token placement, or merging.

WATERFALL

The Waterfall adds revenue to the route based on phase. When a Company runs to the Waterfall, they take a Waterfall Postcard. One Waterfall Postcard stays with Corporations after merging (return extras to the stack). Companies and Corporations with a Waterfall Postcard may not include the Waterfall in a route.

WILDFLOWER VALLEY

When a train runs to a stop before the Wildflower Valley and a stop after the Wildflower Valley, 20 is added to the revenue for that route.

THE METROPOLITAN TRANSIT DEPARTMENT (Not available in Micro games)

SETUP

After initial Setup, place the Metropolitan board above the earnings per share board. Place Metropolitan hub tokens according to the chosen game mode as well as two spare tokens, one for earnings and one for the Stock Track. Place a stack of Metropolitan certificates totaling three times the number of players near the Metropolitan board. The Metropolitan will come into play as the game progresses, so no setup on the map is needed at this time.

Note: The Metropolitan has no treasury, it earns no money for itself, and expenses are paid through revenue debt, a process which is explained below.

ENTERING PLAY

Each time a yellow Capital city tile is built, one of the 🚇 Metropolitan hub tokens is immediately placed in the empty token spot.

At the start of the first Stock Round following the first Metropolitan hub token placement, the Metropolitan stock price is set to the highest stock price among existing Companies and Corporations and above all Companies and Corporations in that column.

ACQUIRING TRAINS

The Metropolitan does not purchase trains; instead, any train that is exported is placed into the Metropolitan's train slots. It follows Minor Company train limits. If the Metropolitan acquires a train that puts it above the limit, or it is above the limit due to a phase change, the lowest value train is discarded as a result (*as if it had been exported*). If a 7/∞ train is exported, the Metropolitan receives a 7.

STOCK ROUNDS

Any player may purchase an available Metropolitan share during their Stock Round turn. This purchase is made at the current stock price and counts as that player's stock purchase for the turn.

There is no president's certificate; all certificates are single shares.

There is no limit to how many shares of the Metropolitan any one player can hold.

When any Metropolitan shares are sold by a player, the share price drops one increment on the Stock Track.

Metropolitan shares cannot be sold in the first Stock Round they are available because the Metropolitan has not operated yet.

Metropolitan shares that are sold do not go into the bank pool; instead, they are placed back into the stack of Metropolitan shares next to the Metropolitan board.

At the end of a Stock Round, if all Metropolitan shares are owned by players, its stock price increases by one increment at the same time other fully sold share prices are adjusted.

OPERATING ROUNDS

During the Metropolitan's Operating Round, all players who own at least one share of it will have the opportunity to control some of the Metropolitan's actions.

Starting with the player holding the Priority Deal token and moving clockwise, players act as the Metropolitan based on how many shares of it they hold:

One share: The player may take a track laying action of two yellow tiles or one upgrade.

Two or more shares: The player may take a track laying action of two yellow tiles or one upgrade and may place a hub token following normal hub token placement rules.

Any costs for these actions are marked as deductions from the current round's earnings using the negative earnings track on the Metropolitan board.

(See Diagram 2)

Note: The Metropolitan cannot use the following Events: Rural Expansion, Unions Win!.

The Metropolitan cannot use the following Landmarks: Ancient Ruins, Canyon, Cliff, Rock Formation.

During the Run Trains step, all players collectively determine the highest value route. (If no players own any Metropolitan shares, no earnings are paid out, but the share value is adjusted as though it did.)

If the Metropolitan has multiple highest value routes (equal in revenue) with additional effects to consider (i.e., including the Mirage tile with an even or odd train), the player who owns the most Metropolitan shares determines which highest value route to run. If there is a tie for most shares owned, the tied player who is closest to the Priority player in clockwise order chooses.

Earnings are always paid out with each share collecting 10% of the payout (even if there are fewer or more than 10 shares in play). If, after determining the highest value route, the revenue does not bring the earnings marker to a positive payout, each shareholder must pay the remaining negative amount for each share they own to the bank. If any players are unable to pay the amount they owe, those players must sell one Metropolitan share in order to complete their payment. If any shares are sold in this manner, the share price drops one increment on the Stock Track. The share price then drops one increment on the Stock Track due to no payout, and the earnings marker is reset to the first space of the positive earnings track. If the payout was positive, normal token movement on the Stock Track rules apply, and the earnings marker is reset to the first space of the positive earnings track. (Players may choose to leave the earnings marker on the positive value until the next Operating Round as a reminder of past revenue, but the marker should be reset at the beginning of that Operating Round.)

END OF GAME

Metropolitan share values are counted toward a player's final score like any other share.

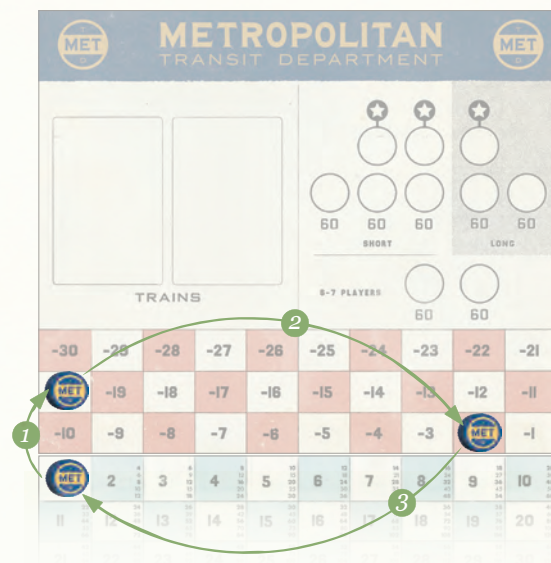

Diagram 2

During an Operating Round, players utilize the Metropolitan to lay track tiles over two mountains and to place two hub tokens, for a total cost of 200.

The Metropolitan earnings tracker is set to -20 (1). Assuming a total run of 180, the earnings tracker would be moved to -2 (2), dividends would be -2 per share, and the stock price would drop by one increment. Players who own shares of the Metropolitan would need to pay 2 per share into the bank. The earnings marker then resets to the first space (3).

EVENTS

SETUP

After the initial Setup, but before the first Stock Round, shuffle the Town Chronicle and New City Herald events separately.

Place New City Herald event cards equal to half the number of cycles in a face-down stack (if playing the Bank Break variant, place all New City Herald event cards in the stack). Then place Town Chronicle event cards equal to half the number of cycles face down on top of the New City Herald event cards just placed. (If playing the Bank Break variant, place three Town Chronicle event cards on the stack.) (See Diagram 3) Reveal the top event card, then begin the Initial Stock Round.

GAMEPLAY

The currently revealed event is active for one full cycle. At the end of each cycle, before entering the next Stock Round, the top card of the events stack is revealed and becomes the active event for the next cycle.

GAME TYPE	TOWN CHRONICLE	NEW CITY HERALD
Short/Micro	2 cards	2 cards
Long	3 cards	3 cards
Bank Break	3 cards	All cards

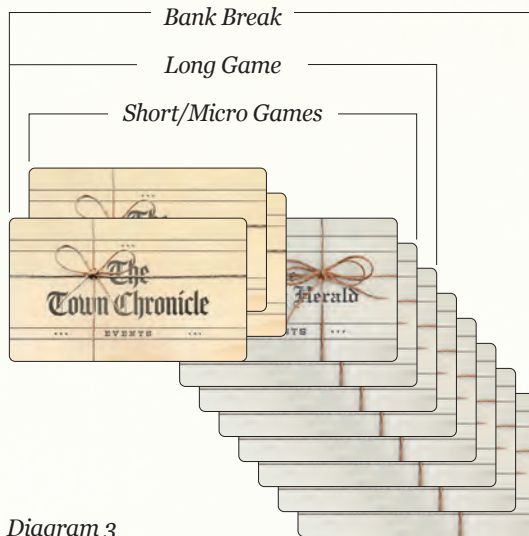

Diagram 3

TOWN CHRONICLE EVENTS

CEOS GET RICH!

Companies and Corporations may pay their president 20 each Operating Round.

THE FUTURE IS HERE!

Tile upgrades may break phase restriction. For example, in the Green Phase, green tiles may be upgraded to purple.

GHOST TOWNS RAZED!

Non-home, basic cities with no hub tokens in them may be laid or upgraded using non-city tiles. If the city is being upgraded, all track segments must be maintained on the tile, but paths through the tile may be altered. If a city with a 🌲 and/or 🏠 token on it is razed, the token is removed from the tile. A 🏠 token removed this way may be placed in a future Operating Round. (See Diagram 4)

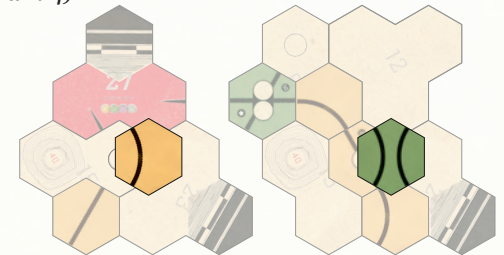

Diagram 4

The above examples are both allowed while the Ghost Towns Razed! event is active. Note that the green tile maintains existing connections on both edges of the tile but not the path through.

OVERTIME!

Play a third Operating Round immediately after the second Operating Round this cycle.

RAPID GROWTH

Players may launch a Minor Company from the first or second row in a column when they win a Minor Company auction during the Stock Round. If the second Minor Company in a column is chosen, the first Minor Company remains in place and is still available to be auctioned. The new second Minor Company in the column is now available for this Stock Round as well.

RURAL EXPANSION

Companies and Corporations may lay extra yellow tiles after their track laying action (including Headquarters track lays if playing with that variant) at a cost of 20 per extra tile. There is no limit to how many extra tiles a Company or Corporation may lay as long as each tile is paid for. *Note: Bridges are considered yellow tiles for this event. If Tunneling Company lays an extra tile over a mountain, the tunneling payment is made into Tunneling Company's treasury immediately after the tile is placed.*

STOCK BONANZA!

Issuing shares does not drop a Company or Corporation's stock price.

NEW CITY HERALD EVENTS

CORPORATE SUBSIDIES

Companies launched this Stock Round receive an additional 50% of the winning bid (*rounded down to the nearest 5*) from the bank in their treasury. For example, a bid of 155 will result in an initial stock price of 70 and $155 + 75 = 230$ being placed in the Company treasury on launch.

MERGER MANIA!

There is an extra Merge Round between Operating Round 1 and Operating Round 2.

OVERTIME!

Play a third Operating Round immediately after the second Operating Round this cycle.

UNIONS WIN!

Companies and Corporations may choose to half-pay dividends. When a Company or Corporation chooses to half-pay, half of the total payout (*rounded up to the nearest 10*) is placed in their treasury, and half of the total payout (*rounded down to the nearest 10*) is paid out to shareholders. For example, with a payout of 130, the Company would receive 70 into their treasury and the remaining 60 would be split evenly among shares (*including those still in the treasury of the Company or Corporation*). A Company or Corporation's stock price is adjusted based on the amount paid out to shareholders. In this example 60 would be the value used.

TRAIN AUCTION TODAY

There is an immediate auction for the Pullman Car. All Companies and Corporations may privately select an amount to bid, and all bids are revealed simultaneously. In the case of a tie, the earliest tied Company or Corporation in Operating Order wins. The winning bid is paid to the bank; all other bids are returned to their respective treasuries.

PULLMAN CAR

- Doubles the highest stop on one route each Operating Round
- Has no value once purchased
- Cannot be bought, sold, or traded in
- Does not occupy a train slot
- Is discarded if the owning Company/Corporation owns no trains

TYCOONS REJOICE

Presidents may own 80% of their Companies and Corporations during this cycle. If there is another Stock Round, any president owning more than 60% of their Company or Corporation must sell shares down to 60% at their first opportunity.

RECORD GAINS!

If a Company or Corporation's total payout is equal to or greater than triple the current share price, the share price increases by **three** increments.

NEW MINORS AND MAJORS

SETUP

New Minor Companies can be integrated into the base game in one of two ways:

- Select a specific set of Minor Companies to play with based on the mode.
- Use the Randomized Minors variant.

Combine new Majors with the Majors of the base game; they are available as new options with no additional setup needed.

MINOR COMPANIES	GAME TYPE
4	2-player Micro Game
6	3-player Micro Game
8	Short Game
12	Long Game

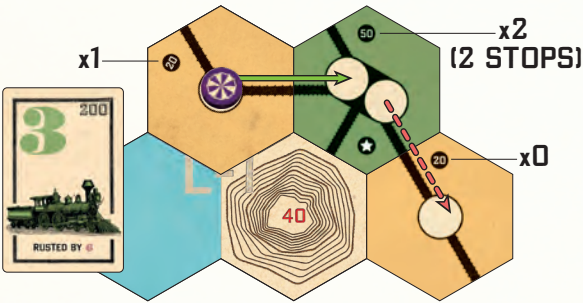

Diagram 5
Circus Company may run 20+50+50 instead of 20+50+20.

COMPANY DETAILS

CIRCUS

Once per Operating Round, during the Run Trains step, Circus Company may double the revenue of a city or Distant Destination by counting it as two stops. The final route that is run must follow all normal route rules (*must contain a hub token, cannot run the same piece of track twice, etc.*).

(See Diagram 5)

MANUFACTURING

On launch, Manufacturing Company must pay 50 from their treasury to the bank, receives the Manufacturing 2-train, and cannot purchase a leadoff train. The Manufacturing 2-train is permanent, occupies a train slot, has no value, and cannot be bought, sold, or traded in. The owning Company or Corporation may choose to discard this train at any time during their Operating Round, removing it from the game.

COUPLING

During the Run Trains step, if Coupling Company owns exactly one non-∞ train, they may choose to uncouple that train into two trains of size 2 or greater that sum to the total of the original train value (*e.g., a 7-train may be uncoupled into a 2-train and a 5-train or a 3-train, and a 4-train*). If Coupling Company owns more than one train they may choose to combine individual trains together to run as the sum of their values. Each connection is marked with a coupling marker. They may combine some trains and leave others to run alone. For example, if Coupling Company is part of a Corporation that has two 2-trains and a 3-train, they may choose to couple a 2-train and a 3-train together to run as a 5-train while also running the second 2-train on its own. Each train card counts against the train limit, but for ownership purposes (*such as when merged with Express Company*), coupled trains are considered single trains, while an uncoupled train is considered two trains. The couple/uncouple choices are made each Operating Round.

SAMPLE MAP

TWIN CITIES

When randomizing Minor Companies during Setup or in the map tile stack, the Twin Cities project tile is used instead of either home tile. When the project tile is revealed, place both two-hex tiles as home tiles. Each Twin Cities home tile must still share three edges with the rest of the map. When Twin Cities Company is launched, both home tiles receive a token. During the Operating Rounds, either/both tokens may be used for track laying and running train routes (*standard rules for running each train are still applied*). For merging, at least one token must be connected to the other merging Company. If Twin Cities Company merges with Expansive Company, eight Corporation tokens are needed. Extra tokens for each base game Corporation are included in this expansion for this purpose.

MICRO GAME WITH 4 NEW MINOR COMPANIES

MISCELLANEOUS VARIANTS

SPECIAL TILES (S-1 AND S-2)

During Setup, remove two terrain (*non-home, non-project, non-Distant Destination*) map tiles and replace them with tiles S-1 and S-2. Tiles removed can be selected randomly or by player consensus.

NEW DISTANT DESTINATION REVENUES

Recommended to be used with the Different Distant Destinations variant from the base game (*assign a random Distant Destination revenue card to each Distant Destination tile as it is revealed during Map Building*).

CROWDED MAP (SHORT/LONG)

During Setup, remove four terrain (*non-home, non-project, non-Distant Destination*) map tiles and replace them with four additional Minor Company home tiles. After Map Building, shuffle the 12 (*Short Game*) or 16 (*Long Game*) Minor Company charters face down and distribute them into three (*Short Game*) or four (*Long Game*) face-up columns, each with four charters.

LONG GAME WITH RANDOMIZED MINORS

Before Setup, shuffle all 16 Minor Company home tiles (*in this mode, map tile 21 represents Adaptive Company's home, though it is not required to start on that tile, and the Twin Cities project tile represents Twin Cities Company's home*) and remove four from the game, face down. Setup then proceeds as normal. When setting up the Minor Company charters, only use Companies that appear on the map.

LAUNCHING DIRECT-TO-MAJOR

In the Purple and Grey Phases, players who win a Minor Company auction may choose to launch as a Minor Company or as a Major Corporation. To launch as a Corporation, select an available Minor Company and immediately convert it to an available Corporation using a blank partner charter. The new Corporation will have eight shares in their treasury, one home token, two available 60 cost hub tokens (*no FREE hub tokens*), and one Company ability. They may buy a leadoff train during their first Operating Round if they can afford one. Shares of a Direct-to-Major launched Corporation may not be sold until the Corporation has performed an Operating Round.

6-7 PLAYER MODE

During Setup, shuffle all map tiles (*including special tiles S-1 and S-2, all Minor home tiles, and the Twin Cities project tile*) and Capital project tiles together. When playing with Landmarks, randomly select three Landmark project tiles to shuffle into the map tile stack at the same time. When playing with Events, construct the Events stack with two New City Herald Events on bottom and three Town Chronicle Events on top. Include the extra  and  trains in the available trains stack. Players each start with 265 (6-player) or 225 (7-player) depending on player count. Play five cycles.

Note: It is recommended to play this mode using the Hostile Mergers and Launching Direct-to-Major variants.

SEEDING THE MAP TILE STACK

Some groups may find that Landmarks, Distant Destination tiles, and Capital project tiles can feel awkward or underwhelming if flipped at inopportune times. Here are some suggestions from our playtesters for additional steps to take after the tiles for the chosen mode have been selected:

THE KIDDER METHOD:

This method ensures no Landmarks come out too early or too late.

Shuffle all non-Landmark map tiles and set aside eight of them. Shuffle the Landmarks into the remaining tiles. Place four of the set-aside tiles on the bottom of the stack and the last four on the top of the stack.

THE SPANISH METHOD:

This method front-loads Landmarks so the rest of the map can be built around them.

Shuffle all non-Landmark tiles and set aside 12 of them. Shuffle all Landmarks into the set-aside tiles and place that stack on top of the remaining stack.

THE WALKER METHOD:

Evenly distribute different features for a very balanced sequence.

Create several subsets of features like Distant Destinations, Minor home tiles, Landmarks, Capital project tiles, and terrain tiles. For example, a subset may have a Distant Destination, a Landmark, a Capital project tile, a few Minor home tiles, and several non-home terrain tiles. Shuffle each subset individually and stack them to form the complete map tile stack.

Special thanks to everyone who participated in our playtest games and provided feedback.

Group Leaders:
